Time for winter tires

It's not just the ice and snow on the road — your all-season tires start to lose traction when the temperatures reach 7°C (which is also when you can see your breath). Change to winter tires before snow begins to fall to help keep yourself safe... and avoid all the last-minute crowds trying to get theirs changed after the first winter storm.

Winter Tire Facts:

- ⑥ Tires typically lose 1 PSI of pressure for every 5°C drop in temperature
- ⑥ Driving with one tire on your vehicle under-inflated by 20% wastes about two weeks' worth of fuel per year
- ⑥ All-season tires begin to lose grip below 7°C

Why buy tires from Canadian Tire Georgetown?

- One of Canada's best tire **warranties**.

Every passenger, light-truck and SUV tire purchased and installed at Canadian Tire comes with a 5-year (pro-rated) road hazard warranty.

- We also offer an extended tire warranty program starting from **\$7.99 per tire**. Ask us for full details with your tire purchase.

- We are one of the only retailers to conduct professional **tests** and display the **results**.

- On- site seasonal tire storage
5 year free tire rotation (every 10,000km).

- **Price Match Guarantee** on tires and wheels. That means you'll always get the best price at Canadian Tire.

OIL CHANGE MADE EASY:

Let us help you get ready for winter — a 40-point inspection is included with every oil change to ensure you are aware of your vehicle's health.

12 MONTH EQUAL PAYMENTS

NO FEE • NO INTEREST FINANCING

on tires and auto serve purchases totaling \$200 or more.

*See terms and conditions for full details.

**DOES THIS APPEAR ON
YOUR DASHBOARD?**
YOU MAY HAVE TPMS ISSUE!

What is TPMS?

Tire Pressure Monitoring System is an electric system for monitoring your vehicle's tire pressure. TPMS provides drivers with a visual warning if a tire's pressure is low, alerting them to take action.

Why is tire pressure important?

Your tire's contact with the road is directly related to its air pressure. Driving on under-inflated tires can compromise:

- Stopping distance
- Fuel economy
- Tread wear and the life of your tire
- Ride handling and comfort
