IMMEDIATE DENTURES

An "Immediate Denture" is a denture that is inserted immediately following the extraction of the natural teeth. Using this method, the denture actually acts as a sort of bandage to help the tissues heal. The denture must be left in place during the first 24 hours. You must follow normal post extraction recommendations, from your doctor and then come in for an adjustment/check-up appointment the following day. Another advantage is that the patient gets their denture right away and doesn't have the inconvenience or embarrassment of having to go without teeth. Immediate dentures are very popular, however this route is not ideal for everyone. It often involves an extensive period of adjustment in which the patient and Denture Therapist must work closely together for some time for best results.

If you have never worn dentures, your new teeth will probably feel strange and bulky in your mouth. This is because the muscles of your face, lip, cheeks, and tongue are used to your former teeth, or to nothing at all. These muscles are being stretched and molded to new contours and dimensions. This muscle tension will subside in a short period of time. Also, learning to chew properly with new dentures may take two to six weeks.

It is also important that the person who extracts your teeth does not have to be the person who makes your denture. Denture Therapists are "denture specialists" who work together with other dental professionals, to make sure you get the best denture care available.

Season's Greetings!

In the rush of events, we tend to overlook the important friendships that are the true basis of business relationships. One of the great pleasures of the Holiday Season is the opportunity to exchange greetings with those whose friendship and goodwill are valued so highly.

In this spirit it is a pleasure to say 'Thank You' and extend sincere appreciation for the very pleasant association enjoyed with you.

May a bright and prosperous new Year bring happiness to you and to yours.
