

ALTON HILLS HYDRO

ENERGY HINTS! How to Reduce Your Heating Bills

Lower Your Thermostat

Set your thermostat at about 20 degrees Celsius (68 degrees F). For every degree above this recommended setting your heating fuel use could rise by about five per cent. Setting a thermostat higher than normal won't heat your home any faster.

Don't Overheat Unused Space

Close doors leading to unheated parts of the house. If you have a spare room that's not being used, close the hot air register or turn down the baseboard heater and close the door to that room.

Pictured above is two of a series of new safety signs. They have been designed especially for children to warn them of the dangers of playing with equipment and climbing hydro towers or poles. Some of the signs feature ZAP the Electrical Safety Bird and all feature a very clear warning. Why not take a minute to talk to your children about electrical safety outdoors?

Show them the signs in this ad. Thank you for helping.
