## Concert Series to benefit Habitat for Humanity

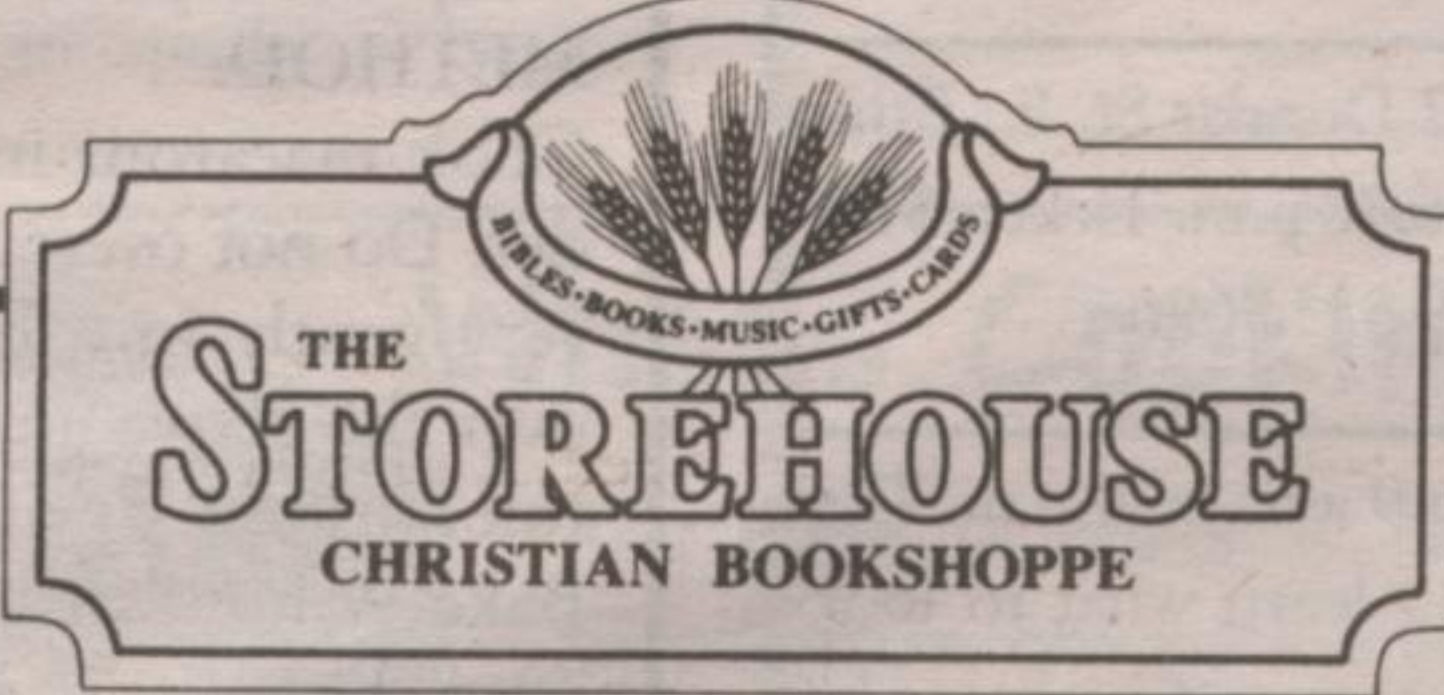

A concert series will be held at Rockwood United Church this year to benefit the two new homes being built by Habitat for Humanity.

On Friday, March 30th there will be an evening of music and song by local entertainer James Gordon. Gordon, a former Eramosa resident, is well known for his work over the years with the group Tamarack, and his songwriting skills for CBC Radio's "Basic Black." The concert starts at 8 p.m.

The second concert is Friday, June 15 and features Rev. Glen Soderholm from Nassagaweya, with a warm, soul-satisfying blend of thought-provoking material. Both evenings will provide an opportunity for the family to enjoy an evening of song at \$15 per person. Refreshments will be available during intermission.

Advance tickets can be purchased from Deb Quaile at 519-856-2386.

### Dental Materials

Charles Goodyear invented a denture base material back in the mid 1800s. This material was called "Vulcanite." Vulcanite is a dark brown, semi-rigid rubber. Since then, denture base materials have come a long way, and vast changes and improvements have been made. Today very modern plastics and acrylics are used.

The artificial teeth on a denture were made from such materials as bone and ivory. Precious metals such as gold and silver were also tried. Even wood was used to make teeth!

Finally, porcelain and plastic teeth have replaced the former materials. We've come a long way since the days of "wooden teeth." Denture technology has been vastly improved for denture wearers, and they are continually discovering new techniques and materials.

Today, more than five million Canadian adults are wearing dentures. That's more than one out of every four people in Canada.
