### TIPS FOR DENTURE WEARERS

- Dentures should be scrubbed well and the inside of the mouth cleaned twice daily.
- Swab or brush the inside of your mouth to remove food debris and collections of bacteria which can irritate your gums.
- Return your dentures to your mouth while still wet, by inserting it sideways and then rotating it into place.
- If you have a partial denture, remove it by placing your fingernails over clasp and use a pulling motion.
- Clean your partial denture in the same way you would clean a full denture. Remove the debris form around the clasps, since they rest directly against natural teeth, and can cause the natural tooth to deteriorate if left uncleaned.
- When you clean your dentures, you should fill the basin half full with water, or place a towel in the sink, so that if you drop your denture, it will not break.
- Never use scouring powder or bleach on your dentures!
- Calculus or tartar deposits may be removed more easily from the denture by brushing, after soaking them in a cup of water to which 2 teaspoons of white vinegar have been added.
- As a general rule, all dentures, partial and complete, should be taken out of the mouth at night. They should be placed in a container of water, as dentures will warp if left out to dry for long periods...If you use a cleaning solution to soak them, the denture should be rinsed thoroughly before you return it to your mouth.
