 Georgetown

Georgetown DENTURE CLINIC

RELINING DENTURES QUESTIONS AND ANSWERS

Q: What is a permanent processed reline?

A: A processed reline is a way of re-basing your denture with the same type of long cure from which it was originally made. This will make the denture fit more snugly to your ridge.

Q: Will it change the appearance of my teeth?

A: No, it only re-fits the denture to your ridge, no change of tooth position takes place.

Q: What are soft, or cushion relines?

A: A permanent soft rubber lining is applied to the lower denture inside ridge. Soft, or cushion relines are an excellent alternative for those who have sensitive oral tissue and tend to get frequent sore spots. A properly applied soft lining can provide years of comfortable chewing and smiling!

Q: How long will it take?

A: Most relines commenced in the morning are completed and returned to the patient that afternoon.

Q: What if I'm a working person and can't give up my teeth for a day?

A: The alternative is to bring your dentures in after work. It can be relined and returned to you the next morning by 8:00 a.m., or come in after work one day, and pick them up after work the following day. Relining an existing denture is an economical way to prolong the life of your plate by restoring and maintaining a firm comfortable fit.
