ness around anger and provides constructive alternatives.

The cost is \$95/participant. To register or for more information, call 905-693-4270.

The course will re-run in Burlington on Wednesdays starting Nov. 9.

In November, starting Nov. 7, a four-week Stress Management course will be offered in Milton. This course examines the sources of stress in our lives and looks at practical solutions. To register or more information call 905-693-

Red Cross branch needs volunteers/drivers

The North Halton branch of the Canadian Red Cross Society is looking to recruit volunteer drivers for the Georgetown and Acton area.

Volunteer drivers are needed to take local elderly and frail members of the community to their medical appointments. The clients are on their own normally without friends or family to take them, and desperately need help.

A clean driver's licence, reliable vehicle (gas reimbursement is provided) and police check are required—first aid training is provided.

If you have just a couple of hours per week to spare, please call the transportation

co-ordinator Judith Dobbs at the Milton branch, 905-875-1459 for more information.

The North Halton branch of the Canadian Red Cross Society is also looking to recruit two or three part-time paid drivers, to take part in a new transportation project (six-month position, possibly to be extended).

These drivers need a valid F licence and police check. The branch will provide first aid training and the vehicle. Drivers would be working with the elderly, supportive housing and mental health clientspatience and a great attitude are required.

If you are interested in these opportunities, contact Dobbs, 905-875-1459.

Lend Your Ears

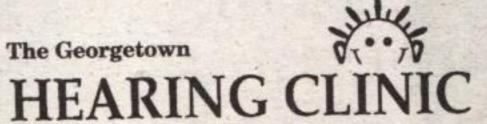

By Cory Soal R.H.A.D.

New technology developed in the past several years can help most people with hearing loss to achieve improved communication. Today's hearing instruments have evolved from simple devices to remarkably sophisticated and technologically advanced personal hearing computers. In just the last few years, more advances in hearing aid technology have been made than throughout history.

In many hearing aids, there are no longer knobs or controls, because the instruments automatically adjust loudness. Some hearing aids are programmed so that they require only the push of a button either on the hearing aid or on a wireless remote control to switch to different listening situations and provide balanced sound in the office, at home, on the telephone, or at a concert. Digital and digitally programmable hearing aids have been introduced that amplify signals in new ways and make the benefits of hearing aids even more customized. Many hearing aids are virtually computers with flexible and sophisticated processors that analyze and respond to specific sounds. Some advanced hearing instruments process sound more than a million times per
