UPPER DENTURES

Your upper dentures are very important for many reasons. You especially want your dentures to look good, but it is also important that they fit well. Because of the natural curve in the roof of your mouth(palate) suction is created, therefore holding the upper denture snugly in place. Your tongue can also aid in helping to keep the denture in place. Because of these factors, few people have trouble with stability.

The upper denture is usually more visible than the lower, therefore the look of the upper is almost as important as the actual fit. Because the upper denture is so visible, as you are constantly talking, eating, and smiling, it is very important that you have natural, nice-looking teeth. We work hard to make sure that you have teeth that suit you. You don't want them too big, too small, too white, too yellow, etc. Just because you wear dentures doesn't mean they have to look like dentures!

Today's dentures are more natural looking than ever before. Together we can create a more natural looking you!

You do not need a referral; simply call our office direct.

Creating confident smiles since 1982. ☺

R.H.A.D.

New technology developed in the past several years can help most people with hearing loss to achieve improved communication. Today's hearing instruments have evolved from simple devices to remarkably sophisticated and technologically advanced personal hearing computers. In just the last few years, more advances in hearing aid technology have been made than throughout history.

In many hearing aids, there are no longer knobs or controls, because the instruments automatically adjust loudness. Some hearing aids are programmed so that they require only the push of a button either on the hearing aid or on a wireless remote control to switch to different listening situations and provide balanced sound in the office, at home, on the telephone, or at a concert. Digital and digitally programmable hearing aids have been introduced that amplify signals in new ways and make the benefits of hearing aids even more customized. Many hearing aids are virtually computers with flexible and sophisticated processors that analyze and respond to specific sounds. Some advanced hearing instruments process sound more than a million times per second.

To find out more about these latest advancements call...

Dominion Gardens playground finally finished

Politicians and neighbourhood mothers and children braved the wet weather recently to cut the ribbon officially opening the newly-installed, and long-awaited playground equipment at Dominion Gardens. On hand for the ribbon-cutting were (in front, from left) Wards 3-4 Regional Councillor Jane Fogal, Ward 3 Councillor Moya Johnson, Halton Hills Mayor Rick Bonnette, and Ward 3 Councillor Mike Davis.

On May 31st, we'll all be able to breathe a little easier

Smoking is the No. 1 preventable cause of death in Ontario today.

The Smoke-Free Ontario Act, which comes into force on May 31st, is part of a broad effort to improve public health by reducing Ontarians' exposure to and use of tobacco products.

The legislation bans smoking in all enclosed workplaces and enclosed public places to protect workers from second-hand smoke.

The legislation also strengthens laws on tobacco sales to minors and restricts the display of tobacco products in retail outlets.

If you smoke, now is a good time to consider quitting. For help and a plan to quit, call Smokers' Helpline at 1-877-513-5333. Or visit www.smokershelpline.ca for tips, tools and support.

**For more information on the Smoke Free Ontario Act, contact your Public Health Unit or call 1-866-396-1760. TTY: 1-800-387-5559.
 Or visit www.ontario.ca/smokefree**
