**... Lend Me Your Ears**

**L.M.Y.E. INDUCED HEARING LOSS (NIHL)**

There are several things that determine whether or not a sound can damage your hearing, including the loudness of the sound and the duration of exposure. Hearing loss can occur as a result of a one-time exposure to a loud sound, or repeated exposure to loud sounds. However, some individuals will be more susceptible to NIHL and there is really no way to tell who these individuals are:

Sounds louder than 80 decibels (dB) are considered dangerously loud and could potentially cause a NIHL. Below is a list of the dB level of some sounds that may be encountered during the course of a day.

- 60 db Average conversation level
- 70 db Vacuum cleaner
- 80 db Alarm Clock
- 90 db Lawnmower
- 100 db Chain saw
- 110 db Rock Music
- 120 db Jet during take-off
- 130 db Jackhammer
- 140 db Firearms

At the Georgetown Hearing Clinic we specialize in custom fitted hearing protection.

**ALEX TRENTON**  
DENTURIST

**CARING FOR OTHERS**

As well as cleaning and inspecting dentures, the care giver should also check mouth tissues. With the other person's permission, look closely inside his or her mouth. Check for swelling, red or white patches, color changes in gums, or sores that don't heal within a few days. If you spot any of these irregularities, contact your dental professional. With moistened gauze, massage and clean inside the mouth, and tongue.

Remember, dentures should be removed at night, in order to give the tissues a rest and your mouth time to breathe.

You do not need a referral; simply call our office direct for an appointment.

Creating confident smiles since 1982.
