NEW BREAK THROUGH FOR LOWER DENTURES

Does your lower denture move from side to side? Do you have difficulty in speaking? Or, in eating even the softest foods? Does your denture fly out of your mouth when you cough or sneeze? Do you have a flat lower ridge? If you answered YES to any of these questions, we could have the answer for you. Now, we can make those dentures fit firmly for virtually every lower denture wearer!

With the new "MYLOC SYSTEM." The product of over five years of extensive research, the Myloc System consists of varying sizes of specially designed "Wings". Once attached to your denture, these Wings give you the stability you've been hoping for and, it's completely invisible in the mouth.

It can be installed on your existing denture in the same length of time as a simple repair. With Myloc, you won't experience any disruption of normal business or social activities.

Patients across the country are already wearing dentures with Myloc Wings attached. They report greatly increased comfort when compared with dentures without the Myloc System.

Myloc has been designed to be affordable. In fact, the coat is about the same as a standard denture reline. We specialize in problem lower dentures. Give our office a call to see if the Myloc System might work for you.

You do not need a referral. We offer no charge, no obligation consultations.

Creating confident smiles since 1982.
