

# Project Porchlight a bright idea

CYNTHIA GAMBLE  
Staff Writer

How many people does it take to change a light bulb? The Mayor's Green Plan Task Force is hoping at least 6,800.

This month, task force members Councillors Clark Somerville and Jon Hurst, turn the light on Project Porchlight in Halton Hills.

"Project Porchlight is a non-profit group, supported by the Ontario Power Authority and the Ontario Trillium Foundation, that uses community groups to deliver a (13-watt) compact fluorescent light (CFL) bulb to selected homes in Halton Hills free of charge," said Somerville. "The goal is the homes that receive them will use them to replace their porchlight to show the neighbourhood they are conserving power."

To date, 6,800 light bulbs will be delivered to homes beginning October 20. Project Porchlight is contributing 4,800, and Green Task Force members Neilson Dairy and Halton Hills Hydro are contributing another 1,000 each.

The savings are huge when added up, said Somerville, who spotted the campaign during his attendance at this year's Federation of Canadian Municipalities conference, and brought it home to Halton Hills, enlisting the enthusiasm of the newly-formed Mayor's Green Task Force.

"Each bulb saves \$50 in hydro savings (over five years) and each bulb saves 125 pounds of coal from being burnt to create power," said Somerville.

"With 6,800 times \$50, that's \$340,000 in hydro savings in Halton Hills alone and 850,000 pounds of coal that doesn't have to be burned—that's equivalent to 15 dump trucks of coal."

"It's a small thing, but every bit helps ... and once you put it into perspective what it saves in (hydro) money and coal (greenhouse gas emissions)—it's huge!"

Hurst agrees, putting the numbers into a national perspective at a recent Town

council meeting.

Replacing even one 60-watt incandescent bulb with a 13-watt CFL in each of Canada's 12 million households could save up to \$73 million a year in energy costs. It would also reduce greenhouse gas emissions by approximately 397,000 tonnes—the equivalent of taking more than 66,000 cars off the road each year. So when you think to yourself what is one bulb going to do. It's not what one bulb is going to do, it's what are 12 million bulbs are going to do."

At least 25 per cent of the town's households will receive the free bulbs with the distribution spread over the town's four wards on a proportional population basis—about 1,200 in Acton, 1,200 in the rural areas and the rest in Georgetown.

Volunteer groups are already lining up to help deliver the bulbs and explain the significance to homeowners. The mayor and every Town councillor and Green Plan Task Force member will hand out 50 bulbs each, plus community groups such as: Georgetown Girl Guides, Acton Scouts,

HOPE (Healthy Options for People and the Environment), POWER (Protect Our Water and Environmental Resources), Christ the King's Club Green, minor hockey teams. Also assisting with the campaign are Halton Hills Chamber of Commerce and the Acton BIA. POWER will be supplying office space and the Town is providing storage space for the bulbs.

"The Halton Hills Green Plan Task Force is very excited that Project Porchlight is coming to Halton Hills," said Mayor Rick Bonnette. "It's a great way for Halton Hills to educate residents on energy efficiency by thinking 'globally and acting locally'. Everyone can make a difference and help protect our environment."

Anyone else wishing to help out, either by sponsoring more bulbs or by helping to deliver them, should contact Somerville, 519-853-9930, clarks@haltonhills.ca or Hurst, 519-853-2015, joh@haltonhills.ca

For more information about Project Porchlight go to the website [www.projectporchlight.com](http://www.projectporchlight.com) or call 1-866-585-6359.

## Fundraising event to continue despite tot's death

Aidan Benoit, the three-year-old Georgetown boy who has been battling neuroblastoma cancer, died at his home Monday.

The young boy, who was diagnosed with the disease last August, underwent a bone marrow transplant, radiation and chemotherapy and seemed to be on the road to recovery until the cancer came back in August.

Caledon resident Michelle Cunningham, a friend of Aidan's and his family, said Aidan was "a vibrant and happy little boy."

"He always made everyone laugh," said Cunningham. "He is in heaven now with the angels and pain-free. We will all really miss him."

Cunningham, who with Terri Funseri, is hosting a fundraiser dinner/dance and silent auction for the Benoit family, said the event will go ahead as planned Oct. 19 in Brampton.

The event is sold out, however, anyone

interested in making a donation to the family or items for the silent auction is asked to call Cunningham at 416-948-8697.

Aidan is survived by his parents Donna and Kyle, brother Nathan, and grandparents Don and Frances Daigle and Shelly Benoit.

Visitation will be at J.S. Jones & Son Funeral Home (11582 Trafalgar Rd.) today (Wednesday) from 2-4 and 7-9 p.m. A memorial mass will be held at Holy Cross Catholic Church (224 Maple Ave.) Thursday at 2 p.m.

# Offloading delays have left Region with only one ambulance

Continued from pg. 1

Halton Director of Land Ambulance Services Jim King said staff continues to work with its healthcare partners in the Halton-Peel Emergency Services Network to develop strategies to address the offloading delays.

"It's really a systemic problem in the hospital system," he noted.

Nosal's report also said there were several instances between April and August this year that only one ambulance was on hand to respond to emergency calls for all of Halton. In those situations assistance is requested from neighbouring municipalities, but they are often unable to help due to high demand in their own areas.

Somerville questioned what can be done to rectify the situation.

Nosal said the key is to increase the number of peak demand ambulances in Halton.

The Region's budget team will consider the staffing needs required to bring on another peak demand unit for 12 hours a day, seven days a week during the 2008 budget process.

King also pointed to the value of emergency response units (ERU)—a fully equipped SUV or mini-van staffed by a single paramedic that costs 60 per cent of what an ambulance would. It's used to provide life-sustaining emergency care while waiting for a transport ambulance staffed by two paramedics to arrive.

He said that between January 2006 and June 2007, ERUs were able to arrive before an ambulance for more than 1,700 local emergency calls.

"I believe it's the way we should go in the future," he said.

Staffing requirements for a dedicated ERU program will be considered during future budget processes.

Despite the delays at the hospital, Halton's EMS response time has been below the mandated standard since 2001 due to an aggressive deployment strategy that results in paramedics spending the majority of their working hours on task, Nosal's report said.
