**DIGITAL AUDIO PROCESSING**

Digital technology is used everywhere. It enables communication satellites to link people and computer systems all over the world in products such as telephones, compact disc players and personal computers. Digital technology has become part of our daily lives. Now, digital technology transforms the way we communicate on a more personal level.

Researchers have spent years looking for a way to put the superior acoustic quality of digital sound processing into something as small as a hearing instrument. Finally the breakthrough, digital audio processing designed to fit into a small, comfortable and attractive hearing instrument. Using the same digital technology that brought superior sound quality to CD players, sound reproduction is clear, distinct and provides a rich and full sound picture. Soft sounds are amplified so they become audible, and loud sounds are kept from becoming uncomfortably loud.

Communication forms, maintains and enhances relationships between people. Good communication is a vital ingredient to an enriched life. Now digital technology offers a whole new range of possibilities for people with a hearing difficulty.

## Tooth Chatter

by  
**ALEX TRENTON**  
DENTURIST

**SPECIALIZING IN PROBLEM LOWER DENTURES**

5 COMMON COMPLAINTS:

1. Why are lower dentures more difficult to get accustomed to?
2. Why do my lower dentures always move around or slip out?
3. If I keep my dentures out at night, will my face sag?
4. Why do my teeth click when I chew?
5. Why can't I get used to the lowers! I wear them in my pocket!

If you find yourself asking these questions over and over again, you're not alone. We specialize in problem lower dentures and we understand your problems, and we can offer many solutions. To see if we can help you call us for a free, no obligation consultation

You do not need a referral; simply call our office direct.
