TRENTON  
DENTURIST**

**STAGES OF DENTURE CONSTRUCTION**

1. "IMPRESSION": A mold is taken of your gums. A plaster/stone model is then poured. The exact replica of your mouth will enable us to build you a precision-fitting denture.
2. "BITE BLOCKS": The bite establishes the correct position your jaw should be in when they come together. A wax bite block is used to establish this position. Other points of anatomical interest will be marked on the block at this time.
3. "TRY IN": Type of teeth are selected, and they are actually set up with wax in a plastic denture. This enables us to move teeth around and change them, until we have achieved the desired look and function. Only when you are happy with the look do we begin the long involved process of fabrication and the finished product.
4. "INSERT": Today is the day you have been waiting for, the day you get your new dentures. We will insert you dentures, and make any necessary adjustments. You will then be informed of the best methods for good oral hygiene and denture care.
5. ADJUSTMENT: New Dentures can take up to a month or even longer to settle into your tissue. You will probably experience tender sore spots during this period. Be patient! If you get sore spots, give our office a call. That's what were here for!

You do not need a referral; simply call our office direct.
