Government's ecoENERGY aim: use energy efficiently, boost supplies

Last month I provided an overview of our government's *Chemicals Management Plan*, a tough new \$300-million plan to curb the use of toxic chemicals in Canada. This month I would like to provide an overview of another element of our environmental approach, our government's ecoENERGY plan. This plan contains three initiatives to help Canadians use energy more efficiently, boost renewable energy supplies and develop cleaner energy technologies.

The first initiative is the *ecoENERGY Efficiency Initiative*, a \$300 million investment over four years to promote smarter energy use. Part of this initiative is the *ecoENERGY Retrofit Initiative* that will offer financial incentives to homeowners and businesses who retrofit homes, small buildings and industrial processes to improve energy efficiency.

Only one to two percent of Canada's housing supply is built new each year. Therefore, an important way to reduce household energy use is to make existing Canadian homes more energy efficient. The average grant is expected to be more than \$1,000 and will yield an average 30 percent reduction in energy use and costs. It is expected that up to

Report from PARLIAMENT HILL

By Mike Chong
MP Wellington/ Halton Hills

150,000 homeowners and 800 small and medium-sized businesses will take advantage of these incentives to cut their energy use and costs.

The second initiative is the *ecoENERGY Technology Initiative*, a \$230-million investment to fund the research, development and demonstration of clean energy technologies. New technologies are the key to solving two of our biggest environmental challenges—air pollution and greenhouse gas emissions. With the technologies of today, we cannot overcome these challenges. To meet them, we need to develop the technologies of the future that will focus on key priorities, such as CO2

sequestration, carbon capture and storage and clean oil sands production. That is why our government is investing \$230 million over four years in this initiative.

The third initiative is the *ecoENERGY Renewable Initiative*, an investment of more than \$1.5 billion to boost Canada's renewable energy supplies. This money will be used to boost Canada's supply of clean electricity from renewable sources like wind, biomass, small hydro, and ocean energy. The purpose of this initiative is to bring clean energy prices more in line with those of conventionally generated electricity, and to encourage the adoption of renewable technologies

for water heating, space heating, and space cooling in buildings.

As it currently stands, the heating and cooling of buildings consumes 30 percent of our energy and is responsible for almost 30 percent of greenhouse gases emissions. If owners of those buildings install renewable thermal-energy technologies, we can reduce national emissions substantially, and save owners a considerable amount of money.

These are initiatives that will have a real impact on our environment and our health.

Program details about all three ecoENERGY initiatives, including information about how to apply for ecoENERGY grants, can be found at <http://www.ecoenergy-ecoenergie.gc.ca>.

As always, I can be reached at chongm@parl.gc.ca or at (866) 878-5556.

\$10 million loan creates 100 new jobs

The Ontario government's Advanced Manufacturing Investment strategy (AMIS) has granted a \$10 million loan to Roxul Inc. which will create 100 new jobs at the Milton Roxul Inc. plant.

Roxul is investing in a new production line at its Milton facility that will manufacture a range of new commercial, industrial and residential insulation products including manufacturing processes that conserve energy and generate no waste while using waste materials from the

steel and construction industries. The expansion will more than double the company's production in North America.

The \$10 million AMIS loan supports a total project investment of \$103.7 million. Roxul is making further investments in land and buildings to bring the total investment at the company's Milton plan on Harrop Drive to approximately \$135 million.
