Music, dancing and refreshments served to make the occasion a memorable one, and the participants repaired to their respective homes much delighted with the hospitality of the young couple.

A physical culture class has Prof. Thomas is conducting an elocution class for the benefit of university students desiring instruction in that direction.

> The many friends of Mrs. James Fauntleroy were shocked and grieved to hear of her death at St. Luke's Hospital in Chicago, on Saturday morning. She was about to undergo an operation, and died of heart failure while under the influence of the anaesthetic. The body was conveyed to Lake Forest by special train Monday morning. The funeral was deferred until Wednesday afternoon, pending the arrival of friends and relatives from the east. The service was conducted at the home of the deceased, Rev. Dr. McClure officiating, and the interment was at Lake Forest cemetery.

## Glencoe Department

GLENCOE COUNCIL.

Regular monthly meeting Tuesday evening, 7th inst. All present except Mr. Poole, whose resignation was presented, he having removed from the village to Maywood. Mr. King offered a resolution of regrets at Mr. Poole's retirement, which was adopted.

Engineer's third estimate showed \$6,320.43 due contractor Cape for work on Green Bay road, this making total payments \$13,747.41, and total of work completed to date \$15,326.26. Engineer thinks the deposit of \$18,500 will fall a little short of completing work according to plans and specifications. The completion, however, is secured by guaranty bond, and on final estimate the cash shortage, if there should be one, will be covered by order for balance on the Electric Railway company. Engineer reports contractor will complete the job by November 24, if he can get stone.

Engineer Windes submitted an estimate for completing outlet sewer down Hazel avenue and for carrying it down the bluff and into the lake, masonry, driving piles, etc. Cost estimated at \$7,250, which covers the following items:

One thousand seven hundred feet of 18-inch sewer pipe at \$2.50 per foot; 150 feet 12-inch sewer pipe at \$1.50 per foot; 200 feet 12-inch cast-iron pipe at \$2.50 per foot; 120 feet piling at \$10 per foot; 30 cubic yards masonry at \$5 per yard; 10 manholes at \$25, with 10 per cent. added for engineering, court costs, etc. The total cost of this outlet, the report says, when spread over the district of 87,000 front feet that can be drained by it, is nine cents per front foot.

Mr. Windes accompanied this estimate with a lengthy and very interesting report on the subject of a general system of sewers for the village. His conclusion is that drainage into the lake is far the most economical and otherwise best; that it is unwise for Glencoe to try to make a much more costly disposition of its sewage when it will not contribute to the purification of the lake, which will continue to be polluted by the large cities and towns in Wisconsin in spite of anything that can be done here; that it is better to filter the water we take from the lake than to attempt to send our sewage elsewhere at much greater
