New Conditions Being Created Both Here and in Europe That Are of Vast Import.

Ann Arbor, Mich., Letter: That there is a gradual revolution being consummated in relation to the dis- basis of manufacturing enterprise. tribution of power for manufacturing purposes has scarcely yet become a permanent idea in the public mind. That this revolution will be of gigantic importance to the world at large and will lead to the gradual re-distribution of manufacturing centers has scarcely yet become apparent to our great financiers. The part that this change will play in the socio-economic question is perhaps yet more indefinitely under- the progress of the anarchist move-

of industrial power. The running this media for the transmission of electrical energy there is scarcely any limit to its ultimate distribution.

The "harnessing" of Niagara seemed to us to be a gigantic project. It was the initial step in a movement which London her home. has not only spread through many without proper food. Cows can make parts of the United States but to many parts of the world as well. Particucould make bricks without it, but it is lies where there was no coal available, was an individual known in the "brothexcept at prohibitive prices, for manufacturing purposes.

The most interesting and elaborate works for power transmission have months. It may be literary, musical, been undertaken on the Pacific slope where the coast cities are located at a considerable distance from where the waterfalls are situated.

California particularly possesses very dry climate which furnishes the most favorable conditions for the transmission of electrical energy. There the purposes have been used and power quainted with the foul scheme which transmitted a distance of over, two was intended to shake the dynasties of One man whom we know has made a great success of hauling cut corn fodhundred miles.

This has wrought tremendous changes in California, where coal is dear and where it has hitherto been believed that there was little field for manufacturing enterprise. Numberless enterprises have sprung up and the productive capacity of the state has been shelled corn, and where the grain is fed enormously enhanced. Similar results out on the farm the plan has much to are being obtained in all the cities along the Pacific coast where streams are available.

The entire industrial status of the states of Georgia and South Carolina has been changed by the rapid extension of the transmission of electrical force from the abundant water power

intake. It is likely that many more rivers in Ireland will be used in the same manner, thus diffusing manufacturing industries throughout the island.

As soon as this tremendous new feature of modern industrial enter-rise has been fully developed the industral status of many countries is art to be changed. As we have said, the falling water will supplant the coal field as a JOHN ARMITAGE.

QUEEN OF ANARCHISTS.

A Woman of Beauty Who is a Power For Evil in England.

London Daily Mail: Small doubt exists among those who have followed ment during recent years that one of The coal mine is no longer the arbiter the instigators of the attempt on Mr. McKinley's life was Teresa Brugnolilar beauty and magnetic influence, who for a period of eight years has made

> It will be remembered that last year, when the awful murder of the Italian king startled the world, the man sought by pressmen of London and New York the leader of the Italian anarchists.

He was reported to have been in America when the plot to murder King Humbert was hatched, and to have been actually in touch with Sassi, the feather worker; Quintavalle, the barber, and Lana, the navvy-three of the secret agents who came to Europe from New York with La Bella Teresa and Bresci, the murderer of the Italian king, May 18, last year. Bresci and La Bella Teresa were the only two ackings and statesmen.

When the Gascogne reached Europe La Bella Teresa and Bresci went to Paris, and to disarm suspicion lived in the same hotel, the other three conspirators-Sassi, Quintavalle and Lana -taking up their abode in the workmen's quarters of the city.

Unuke Emma Goldman, who is a mere creature of hysteria, La Bella Teresa has no love for theatrical display. and only on rare occasions takes to the

In her early childhood her father kept the posthouse at Molaret, and when she left her mountain home above the valley of the Dora she took up her abode with her maternal uncle, Ighina, in Turin.

Ighina was the moving spirit of the Malfattori and a desperate aparchist. He was banished and came to London, bringing Teresa with him in 1892. Hereshe first met Malatesta, who used her as his recruiting sergeant.

Her influence was too magnetic for weak men to resist. The murderer, Bresci, first met her in America in December, 1899.
