

COKE FOR \$6⁰⁰

PER TON

Delivered to your bins at the above price if ordered in 10 tons lots. Coke makes the best fuel in the world for furnaces or large heating stoves---both as to efficiency and economy. It is clean---leaves no clinker or ash and goes much farther than hard coal, which is two or three dollars higher.

This is an opportunity to get your winter's supply of fuel at a considerable less cost than heretofore, and you will find (if you take advantage of it) that it does not take your whole income to keep the house warm.

Smaller quantities or single ton lots delivered at an additional cost of 25 cents.
