

SPECIAL NOTICE

If you contemplate using gas either for cooking or lighting at any time between now and spring, orders for services at house connections must be made immediately, as it will be impossible to do any digging after the ground freezes. Our charge for house piping is but 10 cents a foot (barely the cost of the material) and with the latest improved incandescent gas lamp, we can produce a light unequaled by any other form of illuminant and at about half the cost of electricity.

We also handle a full line of fixtures, ranges and heaters introducing the new design of radiator (called the "Gasteam") which we sell absolutely at cost and on terms to suit the customer.

North Shore Gas Company
