8th day of April A. D. 1913.

CHARLES F. GRANT,
I hereby certify the foregoing Report to
be correct, according to the best of my
knowledge and belief.

WM. M. DOOLEY, Treasurer.

Parents and Teachers' Association

Elm Place Division

The reception given by the parents to the principal and faculty of Elm Place school on Thursday evening was a delightful entertainment. There were about 70 people present who were entertained by a musical program given by Mrs. Herbert Smith, vocalist, and Miss Harriet Baugh, reader, who gave a variety of monologues. The auditorium was decorated artistically and due to the kindness of Mr. Fritz Bahr, ferns and palms formed an effective background for those appearing on the stage which was arranged as an interior room. The guests were served with refreshments at small tables which were lighted with softly shaded candles. The hostesses of the evening were the members of the executive board who were Mrs. Henry M. Bacon, Mrs. Frederick Maites, Mrs. Arthur L. Moore, Mrs. Eugene Bournique, Mrs. A. L. Drum and Mrs. Maud Shannon.

The annual meeting took place this afternoon at three o'clock when an election of officers was held. Mrs. Abbie B. Bastin, president of the Parents and Teachers' Association, addressed the mothers of the division.

Your suits should be pressed and kept in repair by The Reliable Laundry's Tailors.

HIS PAST DIDN'T BOTHER HIM

When Swinburne Was Very Close Unto Death by Drowning.

In Mr. Edmund Gosse's reminiscence article, "Swinburne at Etretat," in the Cornhill Magazine he relates the poet's bathing adventure that nearly cost him his life in the late summer of 1898. The timely appearance of a fishing smack on the scene prevented the premature silencing of the voice that was presently to entrance the world for some part of it with the "Songs Before Sunrise."

"I asked him," writes Mr. Gosse, "what he thought about in that dreadful contingency, and he replied that he had no experience of what people often profess to witness—the concentrated panoramas of past life hurrying across the memory. He did not reflect on the past at all. He was filled with annoyance that he had not finished his 'Songs Before Sunrise' and then with satisfaction that so much of it was ready for the press and that Mazzini would be pleased with him."

"And then he continued, 'I reflected with resignation that I was exactly the same age as Shelley was when he was drowned.' (This, however, was not the case. Swinburne had reached that age in March, 1867, but this was part of a curious delusion of Swinburne's that he was younger by two or three years than his real age.) Then when he began to be, I suppose, a little benumbed by the water his thoughts fixed on the clothes he had left on the beach, and he worried his clouded brain about some unfinished verses in the pocket of his coat."

So here again, comments the Dial, we have an instance of the failure of an actor in a real life drama to rise to the dramatic possibilities of his part. They do these things better in fiction.

SULPHUR SHOWERS.

Not Sulphur at All, Only the Pollen Grains of Pine Trees.

Many persons are aware that in spring, and especially in early spring, it happens that after a shower the edge of every pool of water in the streets and along the sidewalks will be bordered by a rim of pale yellow color. As the water evaporates this ring remains as a fine powdery mass, so much resembling sulphur as to have given rise to the name "sulphur showers." This so called sulphur is, of course, not sulphur at all. When examined under the microscope it is found to be made up of a mass of the yellowish pollen grains of pine trees.

Instead of consisting of a single cell, as do most pollen grains, that of the pine consists of three cells, the two larger end ones being filled with air and the other containing the ordinary fertilizing principle. The two air containing cells are larger than the other and act as balloons to buoy it up in the air.

In pines and allied trees fertilization of the cones, by which they are enabled to set and develop seeds, is accomplished by the wind—that is, the pollen is produced in immense quantities and is transported through the air to the cones, which are often on separate, widely distant trees. Thus it often happens that the pollen gets up in the higher currents of the air, is carried for long distances and is only brought down to the earth by the rain, producing the so called shower of sulphur.—Harper's Weekly.

How Wheat Perspires.

When you are perspiring furiously in the dog days, it may or may not console you to think that an ordinary field of wheat is giving off moisture quite as furiously. Between the months of April and July, according to Sir James Dewar, a field of wheat perspires sufficient moisture to cover the surface of its ground to a depth of nine inches. Another interesting fact is that it requires three and a half pounds of water to produce sixteen grains of wheat. Speaking of the solar radiation in tropical places, Sir James says that in six hours about four-tenths of a square mile receives heat equivalent to the combustion of 1,000 tons of coal, while an area of 1,200 square miles receives in one year heat equivalent to 1,000,000,000 tons of coal—the whole estimated coal output of Europe and America.—Philadelphia Ledger.

The Drummer's Tender Heart.

The commercial traveler had just finished a story of a disastrous fire, in which his firm suffered severely. "And what did you do when you heard of it on your journey?" inquired his friend. "Oh, I sent the boss a long telegram of sympathy! He likes that kind of thing. Cost me half a crown." "Half a crown?" exclaimed the other incredulously. "Oh, I charged it to my expenses, of course!" explained the traveler. "Kindly feeling and thoughtful economy could go no further.—Manchester Guardian.

Plausible Excuse.

Guest—Walter, are you sure this is oxtail soup? Walter—Yesuh. Guest—But I've found a tooth in it. How do you account for that? Walter—Well, I don't know, sah; but I reckon dat ox must have been biting his tail—Sphinx.

In a Bad Way.

"My friends," declaimed an orator during a convention—"my friends, I say to you that this great republic of ours is standing on the brink of an abyss!"—Philadelphia Saturday Evening Post.

Sloth, like rust, consumes faster than labor wears, while the used key is always bright.—Benjamin Franklin.
