**Science taken to the Farm**

The following extract from an address to the public sounds a note of vital interest to every progressive farmer.

"We have itemized... the things that ought to be altered... agricultural activities have never yet been given the efficiency of great business undertakings or served as they should be, through the instrumentality of science taken directly to the farm."

In other words—do away with slow, costly and inefficient manual labor and animal power, by the adoption of rapid, convenient and economical Electric Power.

No form of power application can give to farming the "efficiency of great business undertakings" so much as the use of Electric Motors. They assure success in all lines of modern industrial effort.

Let us furnish you some basic facts on the profitable use of Electric Power on Farms

## Fire Insurance

Like charity, begins at home. Putting hot furnace ashes into open barrels or cans is unsafe, and uncleanly. Witt's Corrugated Can is fire-proof, has close-fitting lid. Made of steel, galvanized. The only safe can for furnace ashes.
