

FALL FLOWER SHOW

Did you know there was a Flower Show at Bahr's and that we are anxious to have you and every other Flower lover in Highland Park see it? There are about 3,000 Chrysanthemums in bloom, no better in the country, the same stock which won the Silver Medal of the National Florist's Society.

Our Flowers have a Nation Wide Reputation. We were awarded over 27 first prizes and Certificates of Merit East and West. We ship those Blue Ribbon Chrysanthemums all over the country from Maine to California.

Come over and see the new French Bonvardias, we are the only Florists west of Pittsburgh growing this wonderful flower, it is in full bloom now.

Maybe you have heard of the grand new Ward Carnation, let us show you a house full at it's best, plants loaded down with buds and flowers.

Nelrose is the name of new Snapdragon from New York, we have it in excellent shape.

Come over and spend an hour among these Posies, it will be well worth your while-- Yes the doors are open all day Sunday.

Highland Park Greenhouses

Remember that we not only grow the best there is in Flowers, but have a complete stock of Shrubs, Trees, Hardy Flowering Plants and Flower Bulbs and telephone 85 will get us

Woman's World

A Royal Lady Heads Austrian Red Cross Work.

The report that the Archduchess Maria Theresa heads Red Cross work in Austria brings to public attention a princess whose devotion to good work is notable in Vienna. She is a lady of honor of the Order of St. Elizabeth of Bavaria.

The Archduchess Maria Theresa is stepmother of the murdered Archduke Francis Ferdinand, whose death was the cause of the present European war. The father of Francis Ferdinand was a brother of the present emperor and died in 1866 after having been three times married. His first wife was a princess of Saxony. His second wife, the mother of the Archduke Francis, was a princess of Bourbon-Styria. She died in 1871, and in 1873, when he was forty and she was eighteen, he wedded Maria Theresa, infant of Portugal and sister of Miguel, duke of Braganza, known in Europe as the pretender to the throne of Portugal.

The archduchess is therefore aunt to Prince Miguel of Braganza, who married Miss Anita Stewart of New York. She is also aunt to the young Grand Duchess Marie Adelaide of Luxembourg, through whose neutral territory the Austro-German troops pushed their way in spite of the youthful ruler's spirited protest. The fact that she is aunt also of Princess Zita of Parma, who is the wife of the Archduke Charles Francis Joseph, the heir to the

Austrian throne, makes her little court in Vienna one of importance.

The archduchess is as kind as she is brave. It is related that having heard a fire had broken out in the neighborhood of one of her country houses she instantly drove to the place. Learning that a little child was a prisoner in one of the burning houses, the royal lady rushed into the building, dashed up the blazing staircase and a few minutes later emerged with the child bundled in her arms and quite unharmed. Her own hair, face and hands were, however, badly scorched. For this deed she was made honorary captain of the Central Association of Fire Brigades of Austria.

NICHES AND ALCOVES.

Into These Attractive Bookcases May Be Built Inexpensively.

A closed doorway makes a very nice frame for a bookcase or bric-a-brac shelf. The door should be covered with burlap and then the shelves built into the jamb. With good bracing these may be rounded out to make them deeper than the ordinary door frame would allow for. When finished the shelves may be stained or enameled to correspond with the other woodwork in the room.

Sometimes there is an arched niche between two closets in the bedroom of an old-fashioned house. There may or may not be a stationary washstand in this niche. If there is not built in shelves will make a desirable bookcase or dressing table. In the latter case one shelf should be made at the usual height of a bureau or table. One lower than this can be hidden by a cretonne curtain gathered to the shelf above. A looking glass in the niche above, which should, by the way, be papered in white or a plain pale tint, will complete a very attractive little corner.

Sometimes such a niche is large enough to accommodate a desk. In this case several roomy shelves can be built in above, or a hanging bookshelf can be bought to place there. Again the niche can be made into a cozy seat by the aid of a homelike bench and some cushions. In this case a shelf above, high enough to escape the head will make a fitting place for photographs or ornaments and books. The walls between the shelf and the seat should be covered with burlap or plain cretonne.

Dolly Centers.

Instead of the usual hemming and buttonhole stitching of dolly centers, a quick and easy way is to crochet them around with a medium cotton and hook in the double crochet stitch, working closely. This is especially useful for the small cuttings of damask, from which small rounds, ovals, etc., can be made.

ULTRA VIOLET LIGHT RAYS.

How Man May Some Day Extract His Food From the Air.

Science begins to dream of a day in which man will gather his food direct from the air and digest it without much aid from the various ferments and juices which are now mainly instrumental in that work.

The chief agent in this mighty revolution, according to no less an authority than Bertholet, will be the ultra violet light rays. These are not visible to the human eye. They do not appear upon the spectroscopic. They affect the photographic plate, however, and are probably discernible by some of the lower animals, whose sense of sight is much more acute than that of man.

Much is known of their chemical effects. Few microbes can long withstand their power. The redness and pain of "sunburn" are their work. They are particularly injurious to the eye, which upon exposure to them becomes totally blind in a little while.

Through the agency of these rays Bertholet has actually combined carbon dioxide and water vapor into sugar and other carbohydrates. He has inclosed carbohydrates, fats and albuminoids in sealed vessels of quartz and has seen them digest under the rays. The process is very expensive, of course, but it is hinted that modern inventive genius will so cheapen it in time that fields of wheat may be replaced by factories where food is manufactured from the gases of the air.

And should the men of that day be troubled with indigestion the same agent that makes their food will come to their relief. Stomach troubles will disappear at once before a little bulb of light rich in the ultra violet rays.—Boston Herald.

BIFOCAL LENSES.

They Had Their Origin in Ben Franklin's Double Glasses.

Everybody who uses bifocal glasses probably wonders where the idea originally came from. Bifocal glasses are the kind that possess two separate lenses cemented together so that by looking in the upper part one can see at a great distance and by looking through the lower half one can read. Most authorities are inclined to give Benjamin Franklin credit for the invention. He was, so the story goes, an inveterate reader and could not use his reading glasses when looking any distance away.

Finally the notion came to him that he could combine his glasses, and he thereupon had the lenses cut in half and one-half of each lens placed in the rim of each spectacle rim. The result was that a single pair of glasses was sufficient, though present day oculists

state that the sharply drawn line must have affected his eyes.

From this idea the oculists gradually developed a glass in which the lower part was arranged for reading and the upper part for long distance vision, while the annoying "marking line" was eliminated.—Washington Star.

THEY LOST THE PRIZE.

But Then the Contenders Were Only a Lot of Sea Gulls.

Some campers at a northern lake once put a big fish on a sloping rock near the water's edge to see what the gulls would do.

A soaring scavenger soon spied it and swooped down for a feast.

Seeing the fish in his talons the voracious bird flapped its great wings and screamed greedily as he tried to make off with his find.

But the fish was too heavy to be lifted. The only result of repeated attempts was that the fish began to slide toward the water and soon fell in with a splash.

Diving after it, the gull brought it to the surface, and then began a curious spectacle. Time after time the gull hoisted the fish as high as his strength would permit, only to weaken and let the fish fall again. The noise attracted other gulls and a battle ensued. First one gull and then another would dive for the fish, lift it part a way above the water's surface and be set upon by other gulls until the fish slipped back a sacrifice to jealousy and greed.

For almost an hour this struggle lasted, ending only when all the gulls were tired out. The prize was lost.

A fraction of the energy thus spent in scrapping over an object too big to handle would have secured for each gull an ample meal of smaller fish with which the lake abounded.

Or, a little co-operation, instead of so much crazy competition, would have lifted the fish to a safe place on dry land, where all the gulls could have feasted at their leisure.

But they were only gulls; hungry, unthinking, gluttonous gulls.

Of course, men would have known better. Yes?—Cleveland Press.

"I put my reliance in the wisdom of the plain people," said Senator Sorubins.

"But suppose the plain people do not happen to agree with you?"

"Then I refuse to be influenced by the whims of the thoughtless crowd"—Washington Star.

Poor Papa!

"I am not at all certain," said the father, "that my daughter loves you sufficiently to warrant me in intrusting her to your keeping for life."

"Well," replied the young man, "perhaps you haven't had the same advantage for observing things that I have."—

Notice of Final Hearing on Special Assessment No. 58

Notice is hereby given to all persons interested, that the Board of Local Improvements of the City of Highwood, County of Lake and State of Illinois, having let the contract for the construction of cast iron lateral main water supply pipe, four inches internal diameter in, under and along portions of Central Avenue from and connecting with the present water main now laid in Highwood Avenue and run thence southerly on the westerly side of Central Avenue for a total distance of 325 feet, together with one fire hydrant in the city of Highwood, Lake County, Illinois, and the same having been completed and accepted by the said Board of Local Improvements on the 21st day of October A. D. 1914, and the said Board of Local Improvements having filed in the County Court of Lake County, Illinois, on the 26th day of October A. D. 1914, a certificate showing that the said improvement conforms substantially to the requirements of the original ordinance for the construction of the same, the cost thereof the amount estimated by them to be required to pay the accruing interest on bonds or vouchers issued to anticipate the collection of the assessment for said improvement. A hearing will be had on said certificate, as to the truth of the facts stated therein at the Court House in the City of Waukegan on the 16th day of November A. D. 1914 at 10 o'clock a. m. or as soon thereafter as the business of the Court will permit. All persons desiring may file objections in said Court before said day, and may appear on the hearing and make their defense.

Dated at Highwood, Illinois, on the 27th day of October A. D. 1914.
