

### Announcement

The owner of the Abana Springs of Libertyville begs to inform users of this water that the delivery arrangement we had last year has been discontinued and the ABANA will now be handled only through first class grocers.

This water is bottled and sealed at the spring and fresh from the spring.

### STREETS OF CHRISTIANA.

The Most Tastefully Designed of Any Capital in Europe.

Christiania is probably the most tastefully laid out capital of any state in Europe. Paris itself not excepted. It owes its foundation entirely to King Christian IV. of Denmark, from whom it takes its name, who in or about the year 1623 decided to erect for himself a new capital on the opposite side of the river to Oslo.

The whole of the main streets of the city run at right angles and are extremely wide. Indeed, it would hardly be an exaggeration to call them squares rather than streets. For the most part the architecture is rather penny in design, but the clear air that comes from the fords tends to give the whole place a tone of lightness that it would otherwise lack.

The river Aker contains a wonderful series of waterfalls in the upper courses some little distance from the city, where practically the whole of the necessary power for the ever growing manufacturing quarter of the Norwegian capital is generated. This quarter is rather rigorously restricted to the suburb of Sagene, on the north side of the city, since town planning is something more than a mere name in Norway.

### PREDICTS THE TIDES.

One of Uncle Sam's Machines That Does Wonderful Work.

A machine known as the United States tide predicting machine No. 2 and which is in daily operation in the United States geodetic survey at Washington, makes mathematical calculations which would otherwise require 100 persons to do.

Its work is nothing less than the predicting of the times and heights of high and low tides a year in advance. Its mechanism is of brass and steel. Its house a huge mahogany and glass case and its tender one observer, who turns a crank and copies off on paper the reading of several dials and later removes from the machine a roll of paper on which is plotted the tidal curve for the particular spot along the coast the tides of which have been predicted.

Every year the United States issues a book of tide tables, primarily for the use of its navy and, secondly, for the use of all who go down to the sea in ships. This book of tide tables gives the time to the minute and the height of the nearest tenth of a foot of every high and low tide during the year for seventy of the world seaports, and by means of an auxiliary table the same information for 3,000 other places—Scientific American.

First Carrier Pigeons.

The sport of pigeon flying dates back 100 years, although the Egyptian-trained pigeons to serve as messengers 4,000 odd years ago, and their example was followed by the Assyrians, the Chinese, the Greeks and the Romans. The first pigeon race was organized in Belgium in 1818, and two years later a bird was flown from Paris to Verrieres, where its arrival was hailed by a procession with brass bands. In England the first pigeon race was held in 1875 from Newcastle-on-Tyne to Bexhill. The sport caught on rapidly, especially in Lancashire and Yorkshire, and such long distance flights as from Manchester to San Sebastian (700 miles) have been achieved.—London Standard.

Consistent.

"How devoted your husband is to continued stories?"

"Yes; he even begins the day with a cereal"—Baltimore American.

### WORKED BOTH WAYS.

A Run That Attracted as Well as Diverged Attention.

One morning Mrs. Wilmington's attention was attracted by a strange spectacle coming up the street. At that distance she could not quite make it out. It appeared to be some sort of animal with a headlight fastened to its forehead. As it came nearer it resolved itself into the shape of a human being—perhaps some sheik with a red fez. "But in another moment Mrs. Wilmington recognized Martha Maria Soprana Smith, the seventeen-year-old colored girl who came every Monday for the laundry.

Martha Maria had a flaming red ribbon four inches wide round her head. It was tied in front into a huge bow, the wings of which stood out four inches beyond her forehead.

Mrs. Wilmington was surprised, for although she had noticed some of the signs of pride of dress in Martha Maria, the girl had more than the ordinary amount of good taste.

"Why, Martha," exclaimed Mrs. Wilmington, as the girl came round the porch, "what in the world are you wearing that bow for?"

A slow grin widened the girl's mouth as she said:

"To attract attention, missy."

"To attract attention? Why do you want to attract attention?"

"I don't, mah'm."

"Then why are you wearing that awful bow on your forehead?"

"So folks will look at mah head."

"Why do you want them to look at your head?"

"So they won't look at mah feet—I got holes in mah shoes."—Youth's Companion.

### GOLD LETTERED SIGNS.

None of the Leaf Used in Making Them is Ever Wasted.

"On the matter of domestic economy in the American household, which, it is asserted, the housewives and the boys and girls of the family no longer practice, it is interesting to
