Moraine Hotel Notes

The concert given by Mr. Clayton W. Lunham, tenor, assisted by Mr. Robert Louis Barron, violinist, and Catherine Reed Martin, pianist, was well attended and pronounced by an enthusiastic audience a complete success. So pleased were some of those present that a request was made for another concert and Mr. Lunham has engaged the ballroom at the hotel for Sunday evening, May 22nd, when the same company will perform again.

Card of Thanks

I wish to thank my friends in Highland Park for their testimonial in the form of a substantial purse sent me. I wish each and all of them health and prosperity and a long life to enjoy both.

Very sincerely,
W. C. MCKENZIE,
La Harpe, Kan.

Card of Thanks

We wish to thank the kind neighbors and friends for the kindness and sympathy shown us in our late bereavement, the loss of husband and father.

Mrs. John Sullivan and family. 10 pd

Grip of the Bulldog.

It is a commonly accepted belief that nothing short of being tried loose will induce a bulldog to give up his grip on another dog or on an intruder, but this is a mistake. A little household ammonia poured on him as near his nose as circumstances will allow will make him let go immediately. The fumes of ammonia are so overpowering that a dog cannot possibly maintain his grip and his breath at the same time.

Her Business.

"It's no use trying to steal a march on that pretty girl at the glove counter."

"Why not?"
"She has a way of making every one show one's hand."—Atlanta Constitution.

Eager For Revenge.

Stage Manager—You are to hit the hero with this club in the last act. Villain—I don't think I can wait that long. He called me a ham.—Rocky Mountain News.

The Fan

Its antiquity is immense. A remnant of one was found in the tomb of Amenhotep who reigned over Egypt 3500 years ago. In the great museums of the world are bas-reliefs which show that Sennacherib walked abroad 700 years before our era attended by fan bearers.

Alexander on his conquering march through Asia, more than 20 centuries back found the fan among every people an adjunct of formality and religious ceremony.

Fans there have been, trifles of silk, lace ivory and rare woods, painted by famous artists, held then by fair hands that have changed the destiny of nations. Yet perhaps the ultimate design of all was to create a cooling breeze and this is what the

Electric Fan

does and the purpose of this advertisement is to remind you that the season of the Electric Fans needed activity is here.

HIDDEN WEALTH.

Why It Is Always Wise to Analyze the Earth When Digging.

Material thrown up by burrowing animals or exposed in digging or plowing, and, of course, railway cuttings or any excavations, should be carefully examined for the presence or indications of useful minerals. Fallen stones, especially carried down by rivers, should be carefully inspected, and if any stones of a promising character such as vein rock, which are known as shale stones, be found, the inspection should be continued up the river or the valley. The main may be many miles or only a few feet away from where the stones that belong to the vein now are.

A vein rock usually is of a different degree of hardness to the surrounding rock. It is harder than the surrounding materials. In weathering the outcrop is marked by projecting masses of rocks or depressions, which may be followed by the eye for some distance marking a vein.

These outcrops should be examined to see if they contain any useful mineral or indications of them. If the outcrop presents a spongy looking mass, stained with dark and other hues of brown, it gives a favorable indication. This material is called gossan and is a favorable indication of rich minerals lying underneath.—Chicago Herald.

HARVEY AND THE BLOOD.

How His Theory of Circulation Was Born and Demonstrated.

It was while studying at Padua under a professor who had discovered the valves in the veins that Harvey discovered the circulation of the blood. He was curious to know what these valves were for, and, finding that they all pointed in the same direction, he could think of no reason for their existence unless it might be to prevent the blood from flowing backward.

Placing a ligature on his arm, he found that one set of vessels, the arteries, became distended with blood on the side nearest to the heart, while the veins became distended with blood on the side farthest from the heart. This to him meant only that the blood flowed from the heart through the arteries and back to the heart through the veins. It also explained the beating of the heart and the throbbing of the pulses.

But the medical and surgical world received this epoch making discovery with scorn. Harvey published a book on his discovery, and his practice fell off considerably. Doctors scoffed, and the public looked on him as a crank. It was a quarter of a century after the book appeared before the discovery was accepted by the learned men of the world.—New York World.

The Dumb Waiter.

The value of the old-fashioned labor saving device, the dumb waiter, cannot be exaggerated. Instead of carrying up the many, many things that daily have to come from the cellar they are placed on the dumb waiter. No energy is wasted, and one trip will save three. It serves the place also of the more modern linen chute. The linen chute is not to be taboed, for it has its uses, but it is practically wasting space to have both it and the dumb waiter. In many houses the dumb waiter stops short at the second floor—the reason why has never been discovered—or sometimes it starts at the first floor instead of in the cellar, another enigma. This is as impractical as it would be to have the sidewalk end before it reaches the house. It simply doesn't answer the purpose for which it was intended.—Woman's Home Companion.

Buddha.

The origin of Buddhism, which ranks in numbers among the great religions of the world, is wrapped in much uncertainty, and the personality of its founder is more or less obscure. It is generally believed that Buddha was a prince of a petty Indian nation and that he was born about the beginning of the fifth century before Christ. He was named Siddhartha and was also known as Sakya, his family name. The title of Buddha, which was given him, means "the enlightened." He spent many years in study and solitary meditation and finally evolved the philosophy which he preached for over forty years in northern India. He was about eighty when he died.—Youth's Companion.

Tuning Forks.

The tuning fork was the invention of John Stone, royal trumpeter, in 1811. Though the pitch of forks varies slightly with changes of the temperature or by rust, they are the most accurate means of determining pitch. Tuning forks are capable of being made of any pitch within certain limits, but those commonly used are the notes A and C, giving the sounds represented by the second and third spaces in the treble staff.

His Walking War Record.

The Dundee Courier has this laconic war note:
"Soldiers can be as laconic as sailors. The late Sir George Groves used to tell of an old soldier who went about begging, bearing a placard: 'Actions, 7; wounds, 9; children, 8; total, 24.'"

Fixing the Break.

"They were both broken up by their separation."
"But I understand they've effected a reconciliation and are now re-paired."

The Similarity.

"Jim says his wife's tongue goes as fast as an express."
"Yes, and it's always on the rail."—Baltimore American.

Announcement

We the undersigned Contractors and Builders wish to notify the Public that we are prepared and equipped to handle contracts for carpenter work of any sort. No job too big, no job too small. Work will not be affected by strikers or lockouts.

Save Money on Auto Tires

Buy at Home.

By an arrangement with a manufacturer of High Grade Automobile Tires and Tubes we are now in a position to supply you with high grade heavy wall constructed tires and tubes at a price less than wholesale. These tires and tubes bear a guarantee against imperfections and defects in workmanship and are constructed on a basis to give satisfaction. You pay for no advertising campaign and no other man's mileage. They are guaranteed to give you average mileage and have a heavier side wall construction than most tires at twice the price. Live rubber coupled with skilled workmanship and heavy fabric have placed this tire above all others in demand. All drivers operate their cars under different road conditions and when you get a guarantee you pay a good price for it. Whether you benefit or not is for you to determine. Considering the time and expense required to get your adjustment, are you winner? Prices quoted are cash prices as we cannot arrange with the manufacturers to sell on credit.

THE DARDANELLES.

A Strait Famed in Mythology as Well as in History.

The Dardanelles and the Hellespont are names for the same thing. At its narrowest place the strait is less than a mile wide. On our side is Asia, and on the other is Europe.

The strait is famous in mythology. The pre-Christian invasions of barbarians into Europe often were halted there.

Xerxes and Alexander ferried across. One determined to destroy the civilization of Greece and the other to diffuse Grecian culture over the whole world.

Crusaders went back and forth over this strait. The Roman empire of the east commanded it even after the Mohammedans had established themselves at Adrianople.

By treaty and by consent and by her situation Turkey was given control of this strait.

Strange to say, in modern times the first ship of war that ever passed through the strait was the American, Bainbridge, run by the guns of the forts and unfurled the stars and stripes in front of Constantinople, and in that city he and the American crew were elaborately entertained.

For many centuries Russia has looked with eager eyes for the control of the shores along the strait.—Memphis

An Old Sailing Vessel.

Modern steamships have a very brief life as compared with the old sailing vessels. The Princess Mary, which conveyed King William III. to England from Holland in 1688 and was then over seventy years old, lasted until 1827. This vessel was retained as a royal yacht until the reign of George I, by whose orders she was sold. As the Betsy Cairns she sailed to the West Indies and back for over fifty years and then after another change of ownership was employed as a collier until Feb. 17, 1827, when she struck a rock and was totally wrecked.

It Couldn't Hear Anyway.

Teacher—The bones of a person or animal separated from the skin and flesh we call a skeleton (shows picture of skeleton). Have we bones in our ears? Pupil—Yes, ma'am. Teacher—Then why doesn't a skeleton hear ears? Lizzie—Because it doesn't need any.—Boston Post.

An Oddity.

Head Waiter—What's the matter with that fellow over there? Waiter—I don't know. He doesn't dance, he doesn't care for singing, he says he hasn't got a date with anybody's wife. I'm beginning to think the fool actually came in to eat.—Puck.
