

A time worn proverb says "HE IS ABLE WHO IS WILLING" meaning of course that "WHERE THERE'S A WILL THERE'S A WAY"

## THE GETTING OF AN EDUCATION

There are thousands of people who value an education and who desire to obtain one and who moreover would speedily have one if only they could absorb it by a mere expression of the will or if they could have it injected into them as a doctor might inject morphine. Indeed they would be willing to PAY FOR IT LIBERALLY if their lives were sufficient, but the idea of having to put forth an effort to get it seems not to appeal to them so strongly. That is why it may be said with so much show of truth that THE IGNORANT ARE ALWAYS WITH US. They always have been and it is fair to presume they always will be. BUT THE PROPORTION IS BECOMING LESS AND LESS EVERY DAY. FORTS OF CIRCUMSTANCES IS MAKING IT SO. It is harder to-day for the uneducated to succeed than it was yesterday, and it will be harder to-morrow than it is to-day. If that is true—and it is beyond the shadow of a doubt—should we not promptly take time by the forelock and prepare ourselves for the inevitable.

**TO-DAY AFFORDS YOU THE OPPORTUNITY**  
There was a time when an education was available to the few only—in those whose circumstances made it possible for them to attend a college or university, but TO-DAY—thanks to the unique system of Correspondence Instruction conducted by the

# International Correspondence Schools

OF SCRANTON, PA.

AN EDUCATION IS AVAILABLE TO ANYBODY AND EVERYBODY WITHIN THE REACH OF THE MAIL SERVICE

Cut this out and mail it to the Local Representative whose address is given elsewhere in this announcement. International Correspondence Schools. Gentlemen—Please explain how I can qualify for position as left of which I have marked X.

## WE TEACH WHEREVER THE MAILS REACH

And our teaching is eminently successful. We have more than 150 separate and distinct courses. You study at home in your leisure moments. There is no interference with your daily work. The cost is small. The payments if necessary are easy.

**IN A WORD**  
There are no barriers, no obstacles, nor can anyone name a combination of conditions or circumstances that our system is not designed to meet.

**What More Need We Say?**  
**What More Can Be Said?**

## INQUIRY BLANK

Note the inquiry blank in the lower left hand corner of this announcement. Place an X opposite the position you desire to qualify for, sign your name and address, then cut out the form and mail it to the address given at the bottom of this advertisement. You will at once receive full and complete information. If after that you conclude to join the ranks of the progressive army of workers, we will be glad to point the way by which you can do so. If on the other hand you conclude not to do so, for any reason neglect to do so, that will be your misfortune and not our fault. Please address all communications to

**A. B. Sanders, Manager**  
Murray Block Waukegan, Ill.

## DOLLY'S FUR COAT IS MADE EASILY

Christmas Gift For the Small Girl's Favorite.

THIS charming coat can be manufactured from leftover bits of plush or fur and so provide the small girl with a real joy. Please notice how the coat is cut on the most fashionable lines. Of all dolls' clothing the coat is oftentimes forgotten, and probably nothing gives the small girl more pleasure and occupation to put on and take off than a topcoat with real buttons and buttonholes. Another charming present for a little girl is a doll's house. Secure four boxes 12 by 14 inches, which will form the four rooms. You can, if you desire, remove one end of the second story boxes for the purpose of avoiding a double door. Leave a space ten inches wide, between them to serve as a hall running from front to rear. Floor this and add a rear wall. Make a gable roof, extending the eaves. Make two chimneys and cover them and the roof and outside walls with small the checked table oilcloth of a terra cotta hue. Previous to the covering define the windows by pencil, start with a gimlet and saw out with a small saw. Tack the oilcloth on neatly and afterward cut out at the windows, leaving enough margin to lap over the edges. Use ordinary window glass cut in the required size and secured by a narrow

READY FOR SNOW.

facing all around the window. Windowpanes can be made either square or diamond shaped by using strips of court plaster or passe partout binding. The hall floors, stairways, walls and ceilings, including the attic, can be stained in walnut, which gives a dignified appearance. Make the stairways of the style known as "mill steps" and having no riser, about four inches in length by one and a half broad. The walls and ceilings of the three main rooms can be covered with a dainty art ticking, held in place by the liquid glue lightly spread along the edges. Cover the floors with denim and curtain the doorways. The kitchen walls, ceiling and floor can be covered with a gray checked or diamond with its range, table, chairs, blue and white granite ware, sweeper and a Dish cook, all of which are to be found in the toy shops, this makes for the children the most attractive room in the house. The front edges of the boxes can be covered with a green felt. The house when completed can be set on a strong sewing table with legs shortened about four inches. Provide two inexpensive little stools for the comfort of the children. The furniture of the doll house can all be bought—a tiny piano, mantle and grate, with its seemingly glowing coals, brass fire set, parlor lamps, mirrors, beds and quaint little pictures.

**A Beautiful Tray.**  
Present your offering upon a beautiful tray such as is illustrated here, especially if your gift is to be to the housewife. This tray is mahogany.

TRAY OF MAHOGANY.

Trimmed with a covering of embroidered silk, over which a glass is cunningly fitted. These trays have had much vogue of late and are not hard to make.

Wanted—A wicker baby carriage. Telephone 788-M. 37

**NOTICE OF FINAL HEARING ON SPECIAL ASSESSMENT NO. 61**  
Notice is hereby given to all persons interested, that the Board of Local Improvements of the City of Highwood, County of Lake and State of Illinois, having let the contract for the construction, grading, draining, paving and otherwise improving portions of Waukegan Avenue in the city of Highwood, Lake County, Illinois, and the same having been completed and accepted by the said Board of Local Improvements on the 20th day of October A. D. 1915, a certificate showing that the said improvement conforms substantially to the requirements of the original ordinance for the construction of the same, the cost thereof, the amount estimated by them to be required to pay the accruing interest on bonds or vouchers issued to anticipate the collection of the assessment for said improvement. A hearing will be had on said certificate, as to the truth of the facts stated therein at the Court House in the City of Waukegan on November 22nd, A. D. 1915, at 10 o'clock A. M., or as soon thereafter as the business of the Court will permit. All persons desiring may file objections in said Court before said day and may appear on the hearing and make their defense.

Dated at Highwood, Illinois, November 2nd, 1915.  
JOHN MEYERS,  
WILLIAM SHEAHAN,  
ALBERT OLSEN,  
Board of Local Improvements of the City of Highwood, Illinois. 36-37

## LOCAL REAL ESTATE TRANSFERS

Property Exchanges Record During Past Several Weeks

- REAL ESTATE**

## Special Assessment Notice

Notice is hereby given to all persons interested, that the President and the Board of Trustees of the Village of Deerfield, County of Lake and State of Illinois, having ordered that a cast iron water main 6 inch internal diameter, be laid on the West side of Sheridan Avenue from Hazel Avenue to Somerset Avenue, including fire hydrants, connections, cast iron fittings, gate valves, valve boxes, etc.; the whole cost of said assessment to be paid for by special assessment, to be divided into five annual installments in accordance with an Act of the General Assembly of the State of Illinois, entitled, "An Act Concerning Local Improvements, approved June 14, 1897, and all amendments thereto," said installments to draw five per cent. (5%) interest per annum according to law, the ordinance for the same being on file in the office of the Village Clerk, having applied to the County Court of Lake County for an assessment of the costs of said improvements according to benefits; and an assessment therefor having been made and returned to said court, a final hearing will be had on the 29th day of November, A. D. 1915, at 10 o'clock a. m., or as soon thereafter as the business of the court will permit.

All persons desiring, may file objections in said court before said date and may appear at the hearing and make their defense.

CARL ROMMEL,  
Officer appointed to levy such assessment.

## SEEKING HAPPINESS.

Little Things That Make Living a Joy Are Not Always Appreciated.

We are told that happiness comes by pieces and that it is these small bits linked together that make our lives worth while. Some of us are not content to take our happiness by degrees or at intervals. We want it all the time in big pieces, and if we cannot have it that way we think that we are deprived of our natural rights and look upon ourselves as injured beings.

It is a rather singular expression of human nature how happiness affects the individual. With some of us it makes us friendlier toward others and anxious that they should experience like joys; with others it makes us too satisfied with ourselves to think very much of our neighbors.

Perhaps those of us who know what the joy of living means have experienced both of these attitudes at different periods of our lives and are in position, therefore, to appreciate a varying viewpoint, but even so it is only after we lose something of that joy of living and have found out for ourselves that there are shadows which no amount of sunlight can dispense that we can readily appreciate the blessing of whatever happiness may find its way into our lives.

The little things that count so much in our intercourse with each other are not always regarded as highly as they should be, and for this reason we pass by much that would give us joy if we only knew how and where to find it. —Charleston News and Courier.

## Gardens in the Ice.

A glacier when it dislodges itself and sails away over the Arctic ocean never travels alone. In the wake of every large one floats a line of smaller companions. The Eskimos call this phenomenon "the duck and ducklings," and any one who has watched the progress of the wild duck followed by her brood will appreciate the aptitude of the name. Strange as it may seem, plants grow and blossom upon these great ice mountains. When a glacier is at rest moss attaches itself to it, protecting the ice beneath. Just as seaweeds do. After a time the moss decays and forms a soil, in which the seeds of buttercups and dandelions, brought by the wind, take root and flourish.

## Professional Pawnbrokers.

In many of the mean streets of London there are professional pawnbrokers, well known to the pawnbrokers, who for small payments take clothes and household goods to pawn for their neighbors. It is stated that the function of the professional pawnbroker is twofold. The woman who pawns through a recognized intermediary gets a larger loan than she would if she did a larger business herself. For the pawnbroker the professional pawnbroker guarantees the good faith of the owner and will be able to exercise pressure in case of default.—London Express.

**It Was a Fine Cod.**  
The artist William M. Chase once hired a fish, painted a picture of it in two hours and afterward sold it to the Corcoran Art Gallery at Washington for \$2,000. Mr. Chase afterward informed the fish dealer who had rented him the fish of the price he had received for the picture. "Well," commented the fishmonger, "it was a fine cod."

## SPEED OF PROJECTILES.

How the Velocity of Cannon Balls and Bullets is Measured.

How fast does a bullet travel? The highest velocity ever given to a cannon ball is 1,626 feet per second. This is equal to a mile in little more than three seconds, or nearly twenty miles a minute.

A rifle bullet does not travel so fast as a cannon ball, the average rate being 1,275 feet per second. This matter of speed is tested in a very interesting way.

A long wooden shed is used, in which a distance of exactly 100 feet has been carefully marked off. At each end of this space is a stand something like a target with a large circular opening where the bullet should be. Across each opening is stretched a small electric wire, connected with a delicate instrument in another room.

The rifle from which the firing is done is so aimed that the bullet which flies from it cuts both wires. Obviously, the difference in time between the cutting of the two wires marks the speed of the bullet through that 100 feet.

When the first wire is cut an electric current is broken and a rod falls, moving a pointer on a slide in its descent. The breaking of the second wire acts in the same manner on another set of rods, slides and pointers.

The difference in the marks made by the pointers on the slides makes it possible to estimate the difference in time of fall, and from these calculations accurate figures as to speed are obtained.—London Answers.

## Lost and Found.

It is a world of strange happenings. On the Alaska steamer from Seattle was a young lady who bitterly lamented to a friend aboard the loss of a pin. It was an Elk emblem, gold and jeweled, a present from her brother. She had lost it on the street in Seattle just before her departure. She related the circumstances in the presence of another passenger to whom she had just been introduced by her friend. The fellow passenger seemed interested and finally inquired, "Did you really lose an Elk pin and did it have your initials engraved on the back?" "Indeed I did," replied the young lady. "How did you know about the initials?" The passenger rejoined, "Well, I found it. He had picked up the pin on the street in Seattle just before the steamer had sailed.—Lafette's.

## Ants Are Six Eared.

In the matter of some of their sense organs the ants are more than ordinarily endowed. Strange as it may seem, each ant has at least six ears. Aside from this multiplicity of ears they are located in just about the queerest place imaginable—on the legs. They seem deaf to all sounds made by the vibration of the air, but detect the slightest possible vibrations of solid material. This is supposed to be to their advantage in that such things as approaching footsteps tell more of the possibility of danger than such sounds as are transmitted through the air. So sensitive are their feet that they detect the impact of a small bird shoe dropped on the table from a height of about six inches and about fourteen feet distant from an artificial nest placed at the other end of the table.—St. Nicholas.
