The Eye

is very similar to that of the camera. The fitting of glasses, is a mathematical and practical science and is not any part of medical education. The use of drops or drugs for fitting glasses is evidently impressing to the unwary for a larger fee. There are two classes in fitting glasses, medical men, called oculists, and the druggists specialists known as Optometrists, both licensed by the state. The oculists fit glasses, usually, and also treat disease of the eye, ear, nose, and throat. Usually, the oculists put powerful drugs in the eyes before they make their tests, they claim that this is necessary. The Optometrists, who specialize in testing by drugless methods, confine themselves strictly to the one thing—the testing of eyes and the supplying of glasses for the same when necessary.

On the average 99 out of the 100 persons who go to the optometrist to be tested have healthy eyes, in fact, the sphere of the optometrist is to fit glasses, if necessary, to healthy eyes, so they may be made to see better or more comfortably, or both.
