**THE USE OF POWERFUL
DRUGS WHEN TESTING
THE EYES FOR GLASSES
IS DANGEROUS**

There is ample authority to prove that attacks of glaucoma (impairment of vision or ultimately blindness) have been caused by atropine, drops are claimed by some, necessary to relax the accommodation. Optometrists do this by the use of lenses, but their method does not paralyze the muscles, hence the eyes are being examined in their living functioning condition. This is more efficient, but not harmful, and this profession is advancing rapidly.

The testing of eyes for lenses is a mathematical and practical science, and has no more to do with medical education than religion has to do with the undertaker.
