JAP GAMES HAVE PURPOSE

Children's Pastimes in That Country Are Played With the Idea of Strengthening Character.

For centuries before America was discovered, Japanese children were playing games upon which our boys and girls considered they have a monopoly, and which are regarded as strictly modern. As a matter of fact, most of our pastimes and games have come to us from foreign lands, though they have been modified to suit our needs, and perhaps renamed.

"Pussy wants a corner" and "blind-man's bluff" are as old as Japan itself. As played across seas, however, these games are far superior to ours. Pussy, for instance, is represented as an "Oni," or devil, the corners of the room the four safe harbors of truth with certain shelter from all harm.

In "blind-man's bluff," the children wear queer little costumes made of blue and white cotton crepe, with painted eyes and queer stuffed beaks resembling birds', for noses. They look like weird little gnomes rather than children, as they dash about in a frantic endeavor to catch their victims.

A ghostly game particularly enjoyed by heroic boys requires the same costumes. Some of them plant flags in different parts of the cemetery during the day, under a lonely tree or by a hill, alleged to be haunted. At night they meet for their game of "soul examination," telling stories about ghosts, goblins and on. At the conclusion of each tale when their imaginations are so wrought up that they are in terror, they go up the hill one at a time and bring back the flags planted there, until all are brought in. Thus do they discourage fear and foster courage, the trait of character that they most covet.

TO ALLAY PAIN OF STINGS

Use of Ammonia to Be Avoided in the Case of an Attack by an Insect Wasp.

Ammonia promptly applied when a bee stings you prevents serious consequences and allays pain. It has generally been supposed that this was true also of wasp stings; but Edward R. Speyer, an Oxford university specialist, points out in a letter to the London Times that the application of ammonia or any other alkali to a wasp sting makes it worse.

The reason is that the poison of a bee's sting is acid; that of a wasp's sting is alkaline. Hence alkalies, like ammonia, neutralize the acid of the bee's sting, but aggravate the toxic effects of the wasp's alkaline sting.

The best thing to apply to a wasp's sting is vinegar, being the nearest acid in domestic service. Onion juice, lemon juice, or any other handy acid will do as well.

The Lancet says these facts ought to be widely known, "for not uncommonly the sting proves to be not a simple puncture but the beginning of a toxic process sometimes fatal. A wasp sting on the moist mucosa, as in the mouth, invariably leads to serious inflammation, with most distressing results. If the simple gargling or washing of the attacked spot with an acid fluid in such a case keeps down the swelling lives may well be saved."

Whale's Breathing Apparatus.

An eminent naturalist says concerning the breathing apparatus of the whale: "The windpipe does not communicate with the mouth; a hole is, as it were, bored right through the back of the head. Engineers would do well to copy the action of the valve of the whale's blow-hole; a more perfect piece of structure it is impossible to imagine. Day and night, asleep or awake, the whale works its breathing apparatus in such a manner that not a drop of water ever gets down into the lungs. Again, the whale must of necessity stay a much longer period under water than seals; this alone might possibly drown it, inasmuch as the lungs can not have access to fresh air. We find that this difficulty has been anticipated and obviated by a peculiar reservoir in the venous system, which reservoir is situated at the back of the lungs."

The Eternal Feminine.

The waltz may be ascribed to the reaction following a long and harassing war, and offers a spectacle of very scanty feminine attire. A story in a newspaper dated June 8, 1812, relates: "A young lady of rank and high condition, in the warmth of her dancing heart, thus addressed her partner at the late lord mayor's ball: 'God bless you! take care you don't tread upon my muslin gown, for you see that I have nothing under it.'"

Lady Brownlow describing feminine dress a few years earlier, says: "It consisted of a gown tres-decollete, and short waisted, with apparently only one garment under it. . . a shawl hung over the shoulders." By substituting fur stole or tulle scarf for "shawl" the description would do for the modes of 1919. La femme eternelle. —London Times.

A Little Learning, Etc.

"My husband says he cannot understand women."
"My husband says after a man does understand women he wishes he didn't." —Boston Transcript.

Only Thing to Do.

Doctor—You are all run down. You ought to quit business entirely.
Patient—If I've run down I suppose I'll have to wind up. —Boston Transcript.

Tax Paying Time

It is here and we can't sidestep it. There are times which are more enjoyable and the anticipation of which give us greater pleasure.

But taxes must be paid. They are higher this year and there are good reasons for it. To dig down and produce a lump sum in payment of our taxes is a hardship on most of us. To relieve the situation we offer a suggestion.

Approximate your taxes for the current year. Divide the sum by 12 and deposit this amount monthly in our savings department. That will make it easy for you next year. We do it that way.

AGED HOME RESIDENT DIED YESTERDAY

Heart Trouble and Old Age Cause of Death of Joe Bellaire. Funeral Will be Held Monday

Mr. Joseph Bellaire better, known to the community as Joe Hook, resident of the Railroad Men's home since 1896, died at the home yesterday morning as the result of heart trouble and old age.

He was eighty-one years old and had been a resident here for the past twenty-four years, his home being at Baraboo, Wis.

Mr. Bellaire was quite a mechanic, having twelve inventions to his credit at the time of his death. He made various types of engines and one engine and a caboose. It seems miraculous that this man, who had lost both hands in an accident on the railroad, was able to use the hook and a knife, to make these things.

He was on the Great Northern railroad out of Hancock, Minn., at the time of the accident. In those days it was necessary for the fireman to get down under the engine and hoe out the ash pan. Mr. Bellaire had informed the engineer that he was going to do that, but thru an error he forgot, and when the brakeman told him to go ahead, Mr. Bellaire had both hands cut off, one at the wrist and the other just leaving the thumb.

He leaves a sister, Mrs. Cecelia De Haven of Chicago, to mourn his death.

Funeral services will be held Monday. The remains will be placed in the vault in Mooney's cemetery. Dr. Peter C. Wolcott will have charge of the ceremony.

NO CHANGES MADE IN N. W. TRAIN SERVICE

Practically no change in the schedule or train service locally has marked the change of railroad administration, which occurred at 12:01 A. M. Monday, when the roads were returned to the private corporations.

E. C. Ohrmund, the local agent, states that no changes have been ordered locally, and that conditions for the present will remain the same as before.

HIGHLAND PARK CLUB

George Norman, the golf expert, will be here all day Saturday and Sunday. Appointment can be made for any hour members wish to take instruction. The course will be removed for Tuesday's Ossoli meeting and will be up again on Thursday and will remain for two weeks. We had hoped to have Miss Ada Cooke here during the month of March to give her recital of "Peter Pan," but owing to illness she will be unable to appear until a later date.

UNITED EVANGELICAL

The church year is fast drawing to an end. The annual meeting will be held Wednesday evening of this week when reports will be given of the work of the year in all departments. There will also be a fellowship supper in which it is hoped that all the members of the church will find it possible to join.

The Illinois Conference will be held in the city of Freeport beginning on March 18th when the ministers and laymen of this conference will meet for the annual business session. Some very important business is to be transacted, among other things a Presiding Elder will be elected. Five ministers whose pastorates expire because of the five year time limitation and will have to move. This will necessitate the moving of others whose time limit has not expired. It is not to be expected that Rev. Keagle the present pastor, will be changed as he has only been one year on the field. Much progress has been made, although the results of the evangelistic meetings were not what were expected or prayed for. In the way of finances the church has done remarkably well, and the social and spiritual condition of the charge is fine.

The pastor will preach morning and evening next Sunday. The regular Sunday services will be held except the Junior meetings, which have been suspended until further notice.

There are dances being given every Saturday evening in Witten hall at 355 Central avenue. Herth's Harmony band from Kenosha furnishes the music.

FORESTRY SURVEY OF ILLINOIS STARTED

Robert B. Miller, State Forester at Urbana, Explains Object of Survey, and Its Benefits

Although 30 per cent of Illinois was originally covered by trees, two-thirds of this primitive forest area has been deforested, a good deal of it to its own injury and to the disadvantage of its owners, according to state forester Robert B. Miller, who has entered upon his duties at the University of Illinois.

With a view to establishing a permanent forestry policy for Illinois, a forestry survey of the state has been started. The objects of such a survey are, Mr. Miller states, to ascertain present conditions and values of our existing forests in order to know which of them should be permanently kept as forest properties and which may be more profitably cleared up, now or later, for agricultural purposes; to find forest tracts available, under cooperative management, for demonstration purposes; state should acquire as permanent sources of supply for Illinois industries; to study the uses and values of the farm wood-lot as a feature in the management of Illinois farms; to study the advantages and disadvantages of the use of woodlands for pasturage by cattle, hogs, and sheep; to study the geographic and local distribution within the state of the most important trees with a view to a choice, for preservation, maintenance and cultivation of the kinds best adapted to each set of local conditions; and, finally, to study the relation of Illinois forests, and their removal, to the problem of permanent water supplies, to the occurrence of floods in streams, and the maintenance of underground waters at levels which will prevent their recession beyond the reach of crop plants in times of drouth.

The office of the forester, being at the University of Illinois, affords many opportunities for helpful conference and cooperation, especially with the topographical survey being made by the Geological Survey of the State, the soil survey conducted by the Agricultural Experiment station of the University, the Farm Management bureau of the Experiment station, the county farm advisers, and the Extension service—all located at the University.
