Ethel Flinn and husband to S. M. Carrell, w. d. \$35.00. South 50 feet North 375 feet, lot 11, Highwood.

RUSH PAVING WORK ON BELVIDERE ROAD

Contractors are Putting in Several Hundred Feet of Paving Daily

Motorists, not only in Lake county, but within a much wider radius, will be glad to know that the work of paving Belvidere road west of Waukegan is progressing rapidly. From 200 to 400 feet of paving is put in every day.

The work now has reached Gages Corners, having been brought there from Milwaukee road where it left off last year. The contractors now are proceeding toward the Grayslake school house. This will complete the contract held by the company. They have two miles to go.

At the same time another firm of contractors is paving the road from Volo to the Grayslake school house. They are working from the Volo end of the road. Everything seems to point to the fact that the improvement will be completed soon providing there is no delay in the arrival of materials.

Up to the present time the contractors on the Belvidere stretch of road between Gages Corners and the Grayslake school house have received 25 carloads of cement. They figured that this would be sufficient to complete one-half of the contract. More material is expected shortly as it is said to be easier to get it now than it was earlier in the season.

The plan is to open up the new road as soon as possible but it is necessary for the new pavement to "set" thirty days before it is safe to allow travel on it.

CONGRESSMAN MCKINLEY TO REMAIN IN RACE

Letter from O. L. Davis Contradicts Dispatch Sent out from Springfield

Editor, Press,
Highland Park, Ill.

My Dear Sir:
On Wednesday of this week a press dispatch was sent out from Springfield saying that my neighbor, Congressman William B. McKinley, would likely retire from the Senatorial race. I write this to assure you that there was not then and neither will there be later, any foundation for such a story and that Congressman McKinley's friends cannot understand how it could have gained circulation. The Congressman is now touring the state and will continue to do so until the evening of September 14.

Congressman McKinley's friends launched a campaign in his behalf upwards of two years ago. They and their candidate have made a thorough canvass of the state. It is pleasing to know that there was in the beginning a marked demand for McKinley and it is still more pleasing to know that this demand has grown wonderfully each day, having reached the point that the prediction can be freely made that he will be the choice of his party on September 15.

Please understand that Congressman McKinley's campaign is in the hands of his friends and the Republicans of Illinois and take this as meaning and an assurance that there will be no "stepping aside" insofar as Mr. McKinley is concerned.

Mr. McKinley has many friends and supporters among the readers of your valuable newspaper and I am writing this with the feeling that you would like to write a little "story", putting your readers right and at the same time setting at ease the erroneous story sent out from Springfield.

Fraternally,
ORVILLE L. DAVIS.

MOOSE LODGE TO BE INSTITUTED HERE

(Continued from page 1)
The Order is Mooseheart. Mooseheart is an estate of 1,023 acres of land, 35 miles west of Chicago on the Fox river, between Aurora and Batavia. Mooseheart is a home and vocational training school for dependent children of deceased members of the order. It is primarily because of Mooseheart that men in every sphere of life are joining the order. They want to have a part and lend a helping hand to this remarkable colony which is training the coming men and women of America to democracy's ideal—useful, intelligent citizens. There are 817 children at Mooseheart at present, but all plans are based on an ultimate population of 5,000 children. The residential part of Mooseheart resembles a modern village and consists of about 60 buildings of modern fireproof construction. There is a central heating and power plant, large modern print shop, a high school building, large assembly hall, several industrial shops, a modern farm plant and many dormitories and resi-

"The Egg That Will Hatch"

WHEN the farmer's wife puts a setting of eggs under the old hen, she expects them to hatch. But some just won't.

The tradesman, financier or the man of affairs, will tell you that picking "the egg that will hatch" is an accomplishment to be acquired and to be proud of. He will tell you also that many of his financial and business "settings" have proved disappointing.

The chance is removed when you put your money into a SAVINGS ACCOUNT in this bank—twenty years without a disappointment. You can't go wrong. The investment is certain and productive. It is "the egg that will hatch."

dences. The educational features are highly vocational and practical; about 30 of the most useful crafts are being operated as a part of the educational work.

Installation Monday

Highland Park lodge will be instituted Monday evening, August 2nd. The ritualistic service will be in charge of a team from Chicago, with Supreme Councilman W. A. McGowan of Buffalo, representing the Supreme lodge as instituting officer. The charter membership fee is \$10.00, and it is expected from the enthusiasm manifested at the preliminary meeting, that a large number of the citizens of this community will take advantage of the opportunity to affiliate with this fraternity at the nominal fee. Applications can be filed with Wm. H. Bowden or A. C. Allen.

ELECTRIC SERVICE DEMANDS TREMENDOUS

At this time there is scarcely a central station company for electricity which is able to supply the demands made upon it for power for industrial uses.

In 1919 the 7,243 central station companies in the United States generated 39,559,000,000 kilowatt hours of energy, and employed over 100,000 men. This current was carried over more than 87,000 miles of high tension transmission lines, serving, in addition to the many industrial plants, more than 8,000,000 homes with light and supplying light and power to more than 1,000,000 business establishments. Over 5,000,000 electric motors were in use at the end of the year. As to the future, it is estimated that there yet remain in the United States 14,000,000 houses to be wired for electric light, 150,000 industrial establishments to be equipped with electric power and a possible electrical furnace load of tremendous proportions. With a steady increase in population and industrial growth, the future field of the industry seems to be limited only by the conditions estab-

lished governing its ability to attract investors to furnish new capital so as to make the extensions necessary to meet the increasing demands for service.

PRELIMINARY REPORT OF WAR RISK INSURANCE

A total number of 152,979 applications for converted insurance have been approved by the Bureau of War Risk Insurance, according to an announcement by Director R. G. Cholmeley-Jones who is making public at this time figures of a preliminary report on United States Government Life Insurance, prepared in the Insurance division of the Bureau for the period ending June 30, 1920.

The total amount covered by these converted policies is \$511,521,500 and classified as to the forms of policy offered by the Government, the converted insurance is distributed as follows:

Ordinary Life	37,462	\$ 77,996,000
25-payment Life	45,398	152,536,500
30-payment Life	4,154	19,859,500
20-year Endowment	71	168,276,000
30-year Endowment	8,925	35,233,500
Endowment at age of 62	6,159	27,214,000

The total amount of premiums received on this insurance, including monthly, quarterly, semiannual and annual, was \$10,135,557.28.

The effective interest rate on total invested assets is 5.96 per cent.

The ratio of death losses to gross expected death losses according to the American Experience Table of Mortality has been found to be less than 40 per cent.

A full and comprehensive report of Government Life Insurance is to be issued as of December 31, 1920.

NEWSPRINT ADVANCED 500 PER CENT SINCE 1915

A current report of the Government Forest service says that the largest newspaper publishers in the country have been able to keep down the ad-

vance in cost of their newsprint to about 200 per cent because of their ability to contract in large volume. But the market price, according to the bulletin, has advanced 500 per cent since 1915. It is at this price that the small publisher is compelled to buy his paper stock.

Primarily the reason for the advance in paper is due to a wood shortage. In earlier days the paper mills were built in the lumber regions and their pulpwood was a sort of by-product of the saw milling industry. But in most of these regions the saw-mills have finished, and they are packed up, burned out, or moved away for some other reason. But the paper mill cannot play the part of "carpet-bagger" quite so easily, and as a result the north-eastern part of the United States has become largely dependent upon Canadian wood. Spruce from Minnesota and Canada, for example, is being hauled 700 to 1200 miles to Wisconsin paper mills. In New York state, where nearly fifty per cent of our newsprint is produced, sixty per cent of the pulp and paper mills have absolutely no timber supplies of their own. New Hampshire and Maine appear to be the only eastern states that still have raw materials for making paper, and there is a well-grounded suspicion in the paper trade that the day of profiteering in spruce, hemlock, balsam and poplar is pretty well under way.

The big papers, in any event, are certainly eating up the little ones, and their "funny sheets", magazine sections and other irrelevant features add to the tragedy of the proceedings.

The proposed Roosevelt two cent piece would seem reasonable compensation to the sleeping car porter for brushing off six flakes of dust and one cinder, but unfortunately he won't see it so.

Conservation of Resources people should have the campaign buttons so made that you could hitch suspenders to 'em.
