EX-WO EXPANDED WOOD LATH CORPORATION

Tuscaloosa, Alabama

Expanded Wood Lath PROVED STIFFER THAN STANDARD CONSTRUCTION

Comparative tests made by Robert W. Hunt & Co., Engineers

Load Applied in Pounds	A—Lath and Sheathing Inches	B—Expanded Wood Lath Inches
200	0.08	0.06
400	0.15	0.13
600	0.26	0.20
800	0.59	0.29
1000	1.07	0.37
1200	1.95	0.51
1400	3.65	0.67
1500	5.13	0.92

IDENTICAL panels with frames four feet high and eight feet long, constructed with sills and studs 7 1/2 x 3 1/2 in. and studs placed 16 in. on centers, were prepared.

FRAME A had one side covered with 1/2 x 6 in. dressed sheathing nailed at each stud with 8D nails, and the other side covered with common lath spaced 2 in. on centers and staggered in the usual way.

FRAME B was covered on both sides with Expanded Wood Lath sheets 8 ft. long and 16 in. wide, fastened at the juncture of each rib and stud with 5D nails.

In testing these panels the bottom sill was clamped to the base of testing machine and the pull applied to the top sill in the direction of its length.

Expanded Wood Lath, by this test, has been proven much stiffer than the old standard construction. But added to this advantage are its high insulating qualities and the much lower construction cost when used for either exterior stucco or interior plaster.

Automatically Backplasters
between the lath and asphalt felt. Not an ounce of material wasted. You get the intrinsic value and strength of every ounce used.

Complete Report of This Test and Descriptive Literature Will Be Sent on Request
