**Expanded Wood Lath PROVED STIFFER THAN STANDARD CONSTRUCTION**  
Comparative tests made by Robert W. Hunt & Co., Engineers

**Results of Test**

Actual Movement of Upper Sill

Load Applied in Pounds	A—Lath and Sheathing Inches	B—Expanded Wood Lath Inches
200	0.06	0.06
400	0.15	0.13
600	0.26	0.20
800	0.59	0.29
1000	1.07	0.37
1200	1.93	0.51
1400	3.65	0.67
1600	5.12	0.92

IDENTICAL panels with frames four feet high and eight feet long, constructed with sills and studs 7 1/2 x 3 1/2 in. and studs placed 16 in. on centers, were prepared.

FRAME A had one side covered with 3/4 x 6 in. dressed sheathing nailed at each stud with 8D nails, and the other side covered with common lath spaced 2 in. on centers and staggered in the usual way.

FRAME B was covered on both sides with Expanded Wood Lath sheets 8 ft. long and 16 in. wide, fastened at the juncture of each rib and stud with 6D nails.

In testing these panels the bottom sill was clamped to the base of testing machine and the pull applied to the top sill in the direction of its length.

Expanded Wood Lath, by this test, has been proven much stiffer than the old standard construction. But added to this advantage are its high insulating qualities and the much lower construction cost when used for either exterior stucco or interior plaster.

**Automatically Backplasters**  
between the lath and asphalt felt. Not an ounce of material wasted. You get the intrinsic value and strength of every ounce used.

**NORTH SHORE LINE**

**Carrying Safety Messages to Communities**

AN annual lecture course on safety is provided for public and parochial schools, in the communities served by this company.

Last year 584 safety lectures were given before 22,548 school children.

Carrying the message of accident prevention to children and the public generally is an important part of this company's Safety Service program.

The Charles A. Coffin Medal awarded to the North Shore Line for distinguished contribution to the development of electrical transportation for the convenience of the public and the benefit of the industry.

It is an interesting fact that 707 safety precautions, suggested by employees of the company, were made effective on the North Shore Line last year.

We cordially invite and will appreciate safety suggestions from patrons.

The North Shore Line is the direct route from Chicago to Milwaukee—through the scenic north shore country. It is the quick, clean, convenient way to travel and you can get a train whenever you want one.

**TOURS GREECE WITH FLAG ON RADIATOR**

MEETS GREEKS FROM U. S.

Many Who Lived Here Greet American Professor and Party on Trip Thru Peloponnesus

An American flag tied to the radiator of an automobile truck was the open sesame for a group of American college professors and wives who recently toured the Peloponnesus in a memorable trip. Among the tourists were Prof. and Mrs. Roy C. Flickinger of Northwestern University. Writing from Athens, Greece, shortly after the great trip was ended, the well-known Evanstonian contributed an interesting story.

**Itinerary**  
"We have just returned from our 18-day trip in the Peloponnesus, visiting Corinth, Tripolis, Pylos, Kalamata, Argos, Nafplia, Tiryns, Mycenae and a score of other places," he says in a letter just received in Evanston. "We spent several days in the province of Arcadia which is so hemmed in by mountains as to be almost inaccessible, a fact which gave rise to the post's treatment of it as a land free from the artificialities and meannesses of the usual world."

"The scenery was beautiful but the hotel accommodations were often pretty primitive. The Peloponnesus was the center of the recent counter revolution and the government officials advised us not to venture there at that time. However, we put an American flag over our radiators and went everywhere in safety. There were eleven of us travelling in a Fiat camion belonging to the school, and we also took the school cook with us to prepare the meals in the poorer places and to supervise them in the better ones."

**Greeks From U. S.**  
"It is surprising," continues Dr. Flickinger, "how many Greeks have been in America. There was scarcely a hamlet so small or remote that some returned immigrant did not recognize our flag and hail us in some kind of English. We dubbed these men 'Hello boys' because that was the way they always greeted us, and we had many amusing adventures with them. One of the funniest was at a small village where we stopped to put water in the radiator and a hello-boy said, 'Say, you folks have only 45 stars in your flag and you ought to have 48.' Sure enough that was so, though our highly intellectual crowd hadn't noticed it. The flag was an old one which has belonged to the school for many years."

**JAPANESE PRINTS AT ART INSTITUTE**

The new Japanese print room in the Art Institute, conveniently situated on the first floor adjacent to the regular print galleries which occupy the northwestern corner of the building, has been formally opened to the public. It will be used to hang exhibitions of Japanese prints, principally from the well-known Buckingham collection, which is one of the most valuable of its kind in our country.

The present exhibit consists of a group of portraits of Japanese actors in costume. Representative works of such masters as Katsukawa Shunsho (1726-1793), Katsukawa Shunkei (1743-1812), Katsukawa Shunyei (1768-1819) Ippitsusai Buncho, and Toshusai Sharaku, are shown.

The best society in Japan at this period looked down upon the actor and he was socially ostracised. Edicts were issued forbidding the samurai from attending the playhouses because of their supposed evil influence. The plays or performances at first were little better than loose sketches thrown together, the prevailing numbers consisting of mimetic dancing. As time passed, however, and the theater continued to increase in popularity, plays with plots and with consistent unity of construction, appeared, and the actors became great artists in their profession.

**SYNTHETIC FOODS NEW PREDICTION**

Now we know what's to become of the farmer. The word is passed along that J. B. S. Haldane, an English scientist, predicts chemical synthesis of foods within 120 years to a degree that will rate agriculture a luxury, and mankind will be completely urbanized. A hard fate for the agriculturist, and a hard living for poets and artists if such there be in that distant day. And what of the gardens tilled by suburbanites and commuters? Ill fares the day when no seed catalogue may proclaim man's kinship with the soil. Chemistry thou art afoot. Take thou what course thou wilt.

But invitation to choice is only empty fealty to courtesy when meals hold a single course. If the doctor had his crystal in good kelter the folk who are up and about when his forecast falls due may as well take their calories from a needle. And who is to take old Judge Palate's place? "Dame Science," you say? Well, well, so it goes, so it goes. Poor old fellow, he made mistakes, but no one can hope to please all tastes.
