The Last Word in Vault Equipment

Eighteen inches of steel grip, reinforced concrete—a non-burnable steel door, eight inches thick, weighing eight tons—Every inch of the walls and vault door electrically charged. At night the vault is sealed by the operation of a big, complete automatic burglar alarm system.

A double set of Electric Control Timers within the protected vault automatically switches the current on to the door after banking hours. It is impossible for our Employees or Officers or anyone else to try to open the vault without sounding a full alarm.

Here is the last word in vault equipment. Bring in your valuable papers, jewelry, etc. and protect them absolutely against fire and burglary.
