

CARBIN MONOXIDE DANGER IS NOTED

IS A SEASONAL MENACE

Motorist Who Runs His Car in Garage Is Courting Death, Says Motor Club Bulletin; Warns

"When the first cool days of fall come, we may expect to pick up our newspaper any day and read that some motorist has paid the penalty for his ignorance of the dangers of carbon monoxide poisoning," says Charles M. Hayes, president of the Chicago Motor Club.

"The motorist who runs his car in the garage is courting certain death. Carbon monoxide is a poisonous gas present in the automobile engine exhaust. One cannot see it, smell, nor taste it. This gas is the product of incomplete combustion. It has been found that the exhaust gases of automobiles contain from four to eight per cent of carbon monoxide.

Chemical Action
"Carbon monoxide displaces the oxygen from its combination with the coloring matter of the blood, which absorbs oxygen from the air in the lungs and delivers it to the tissues of the body. Acute carbon monoxide poisoning is evidence by a feeling of illness, a throbbing of the blood vessels and a burning sensation in the face.

"Nausea, headache, dizziness, and drowsiness are other symptoms. If relief is not at hand death results. Persons have been known to work all day exposed to this poisoning without any ill effects until they have reached home when severe symptoms developed.

Many Deaths
"The Chicago department of health reports that in six years 1,426 cases of accidental gas asphyxiation occurred. The following treatment is recommended by the department of health for reviving victims: Call a physician, and in the meantime remove the victim to fresh air, keep the patient at rest, lying down to avoid strain on the heart, perform artificial respiration in this fashion: Patient lies with his face down, arms stretched in front. The operator straddles the patient about the hips and applies firm pressure over the back of the ribs, quickly withdrawing his hands. This maneuver expels the air in the lungs of the victim and the sudden withdrawal of the pressure causes a sharp inhalation of fresh air. It is advisable at that time to have someone simultaneously pull the tongue back and forth in rhythm with the expiration and inspiration. As soon as it can be obtained, a mixture of oxygen and five per cent carbon dioxide should be administered for at least twenty minutes or more and the circulation must be aided over the period of low vitality by external applications of heat."

AMERICANS TEACH CARPENTRY TRADE

Establish Shop in Nazareth for Near East Apprentices, Says Report

The trade of carpentry has always been one of the highly honored professions in the Holy Land. Nineteen hundred years ago a humble carpenter's shop in Nazareth became the training school for a great religious leader. Today Nazareth is again the site of a training school, founded and operated by Americans.

Carpentry still holds its prestige in the near-eastern countries, as is indicated in a recent report from Miss Agnes Evon of Pittsfield, Mass., educational director of the Near East Relief in Palestine. While the site of the original House of Carpenter in Nazareth has become a church visited by thousands of pilgrims, there is something remarkably appropriate in Miss Evon's statement that only a stone's throw away, American philanthropy has established a training school for carpenters. She says:

"Just across a narrow street from the spot in Nazareth where tradition says Joseph taught the young Jesus the use of saw and plane, 200 orphaned children are being instructed in the same trade. In an industrial school operated without thought of worldly gain, these children are learning from Americans the art of constructing the homes so needed in Palestine and Syria, themselves torn by war and overflowing with refugees.

"In a building boom embracing all the near-eastern lands, under the leadership or encouragement of the Near East Relief, more than 100,000 homes are being built or rebuilt by refugees.

"Observers see a genuine, if subtle, peace movement in this building boom in the Levant. It connotes a growth of confidence where confidence has been unknown, and a victory over fear has long been victor. Peace is in the air, for the real builder is too busy to think of war."

REGULAR QUARTERLY DIVIDENDS BEING PAID

The regular quarterly dividend of the North Shore Gas Co. is now being paid. All those who have purchased North Shore Gas Co. stock are now receiving their regular dividends.

OCEAN CANAL WOULD CUT FREIGHT COSTS

Belief That Lakes to Atlantic Waterway Would Help Solve Farmers' Problem

From New York to Liverpool is 3,100 miles, and the cost of carrying a bushel of wheat is, on the average eight cents. From Buffalo, N. Y., to New York City 442 miles, and the export rate, a special rate lower than the usual land rate, is 9.1 cents! It costs no more to ship a cargo from New York to San Francisco via the Panama, than it does to ship the same amount overland to some point in Ohio. It costs the Argentine farmer, with a short land haul and a long sea haul, 22.5 cents a bushel to put his wheat on the European market, and it costs the Red River Valley farmer, with a long land haul and a relatively short sea haul, about 35 cents to get to the same market. The sum total of the effect of long distance from sea upon the agriculture and the industry of the interior of the North American continent is that such distance places that agriculture and that industry under a perpetual handicap, due to extra transportation costs, exceeding that of any other part of the world having a like agriculture, like industries, and a comparable civilization.

SHIP PRODUCTS TO ARGENTINE BY WATER

Cargo of Threshing Machines Go From Milwaukee to South America

During the week of August 15 a shipload of threshing machines left the port of Milwaukee bound for the port of Bahia Blanca, in the Argentine.

This shipment of 1,100 tons made by the J. I. Case Co., passed down the Great Lakes, through the Welland Canal, through the small canals of the upper St. Lawrence, and by way of the Gulf of St. Lawrence and the Atlantic to its destination.

Contrary to the popular impression this voyage is not a "roundabout" one. Due to the fact that South America extends more than 3,000 miles east of Milwaukee the trip down the Great Lakes-St. Lawrence and across the Atlantic is shorter in time consumed and less in cost than any other competitive route.

And this voyage of the Dalwarcic is only a sample of what would occur constantly and in all lines of natural trade relations once the St. Lawrence seaway become a reality.

RADIO MARVELS ARE SHOWN AT CENTENNIAL

Notable Exhibits of All Types of Sets and Accessories and Operation

The marvels accomplished by the present-day radio devices are strikingly shown at the exhibit of the Radio Corporation of America in the Palace of Liberal Arts and Manufactures at the Sesqui-Centennial International Exposition, in Philadelphia.

The exhibit is probably the most complete assemblage of wireless inventions and equipment ever to be shown in one place. The method by which radio is used to operate airplanes in flight, steer huge vessels at sea and flash photographs across the oceans are clearly demonstrated in the various sections of the large exhibit.

At one end of the display is a radio operating room which was at one time part of a ship. The room was cut from the vessel and transported to the exhibit in its entirety. In this wireless room visitors can send cablegrams to any part of the earth and receive an answer.

The radiogram cabin is in charge of R. E. Booth, a former United States Navy operator, who sent the message which brought rescuers to scores of boatloads of survivors of the United States Transport President Lincoln, when the ship was torpedoed by the Germans and sunk off the coast of France, during the World War. S. F. Nielsen, in charge of the exhibit, can amplify a whisper into a shout which can be heard for two and one-half miles. The largest loud-speaker in the world is suspended from the ceiling of the exhibit building over the radio display.

Close by it hangs the loud-speaker which was part of the equipment of the dirigible Shenandoah, through which the commander of the craft shouted his last commands in a vain attempt to save the dirigible from the storm which tore it asunder.

One of the devices which form a chief attraction is the mechanism by which photographs taken one day in London, Hong Kong or Cape Town can be sent by radio and appear the following day in newspapers in America. Machines which broadcast fingerprints, signatures and legal documents are also on display.

The first wireless ship set, which was used in 1898 during the Spanish-American war, is shown beside the latest model of a ship receiver. The early model is twice the size of the one in use today.

CHINESE STUDENT TALKS OF COUNTRY

According to Richard M. Sia, a Chinese student from the Fukien Christian university, Foochow, China, education and Christianity will do as much toward settling the chaotic conditions in his native land as any other civilizing influence. He arrived recently at Northwestern university and is desirous of enrolling in the senior class. He met Dean Raymond A. Kent and is now well on the way toward becoming a regular student at Northwestern.

"I was one of sixty-four T'ing Hwa students who have just come to the United States from government schools in China," he explained. "Besides this group, there were 96 self-supporting students from government schools also arriving in America. I have a little capital and the first semester at Northwestern I hope to be able to make my way without working for a living but next semester I plan to do much extra work to earn needed money. Many of my fellow students have gone on to Boston university, to Cornell and other eastern universities. We are not a part, however, of the Y. M. C. A. group that has also just reached this country."

"Chinese conditions, as we all know, are not peaceful and much now depends upon the education of the masses. I intend to try to do my share and study major in psychology and education at Northwestern and then return to China as a teacher. With this process of enlightening education going on in China, we have high hopes of some day seeing order established and our dear country out of the meshes of civil war and brigandage."

NAME LAND FARMER FOR FEDERAL JOB

The nomination of John C. Smith of Mandan, North Dakota, as a member of the board of directors on the Federal Land Bank zone which includes North Dakota, Minnesota, and other states, is not apt to secure an alarming amount of publicity in the eastern metropolitan newspapers, but it evidences in a striking way the Coolidge attitude toward farming problems. John Smith is a farmer who works with and lives on the soil in North Dakota. He is a successful man in his activities. He goes on to this board charged with a particular responsibility for the condition of the farmers. His selection does not come as the result of any legislative mandate, but because the President and the members of the Federal Farm Loan board felt that a farmer should be added to this board, and furthermore that in all future cases of vacancies that the farm interest should be thus specifically recognized. It is understood the President has already reached this definite conclusion and that the Smith appointment to which he has given his full approval marks the beginning of the course which he has outlined, in short, his principle is to work with, and not talk at the farmers.

CINDER CONCRETE NOT VERY DURABLE

Cinders are not suitable for use in mixing concrete that is to be subjected to heavy loads or abrasion. Cinder concrete, on account of its light weight, is commonly used for filling between sleepers of floors and grading roofs and for fireproofing, for which it is very effective. Select cinders composed of hard, clean, vitreous, clinkers, free from sulphides, soot, and unburned coal or ashes. As a precaution against the presence of small amounts of detrimental substances, cinders should be soaked thoroughly with water 24 hours before being used. If clean they will not discolor the hands.

HEAVY GRAIN EXPORT EARLY THIS SEASON

U. S. Ships Prepared for This Through Foresight of President

Eleven million five hundred bushels of American grain have been shipped during the last two months to European ports—England, France, Germany, and Belgium—in United States Shipping board vessels. This represents the early grain crop from southern Kansas, Oklahoma, and Texas, and the Shipping board has a schedule of vessel sailings to continue shipments for an indefinite period. Back of this happening stands a request of President Coolidge. The farmers it appears some months ago in advance of the harvest, represented to the President that what they were afraid of was a dearth of shipping vessels which would not only pile up elevator costs on them, but might prevent sales abroad. As a result the President gave orders to the Shipping board that they were at once to prepare vessels and make them available, and his request was acted on so promptly that shipments were started in July. This represents a nine million dollar grain movement, and before it is completed, it is expected that the western farmers will have received some sixteen millions of dollars for their crops.

The Fulghum Hatchery FREEBURG, ILLINOIS

Investigation is said to have shown that the two most popular poems in New York City are "The Face on the Barroom Floor" and "The Shooting of Dan McGrew," which again proves, of course, that Broadway is much more cultivated in the literary sense than Main Street.

F. B. Williams Real Estate

NEW SIX-ROOM HOUSE READY OCTOBER 15

A substantial six-room with sun parlor and sleeping porch.

Vestibule, coat room, large living room with open stairs and fireplace. Kitchen complete with cabinets, outside icing, built-in features, etc. Three spacious bedrooms all with cross ventilation, large modern bath.

The sun parlor and sleeping porch are of ample size, both heated.

Concrete foundation, water heat, insulated, water heater, the best of plumbing. The house is Colotex lined, pleasing architecture, but free from all excesses, the value rather being in quality and practical arrangement.

The garage is an important factor, being in the basement reached by an easy incline from the rear.

Large wooded lot, fully graded and landscaped.
