

USE RADIO TUBES TO DISTANCE TELEPHONE

These Devices Utilized to Increase Volume of Voice on Far Calls

Telephoning a distance of 4,000 to 5,000 miles is easily accomplished, but without repeaters every 50 miles or so, this would be impossible.

Some one has asked why it is necessary to have 16 repeaters on this comparatively short line and if it would not be better and cheaper to have one large repeater on each end.

The first telephone repeater used on a commercial line was installed in 1904 between Amesbury and Boston, Mass.

FATAL ACCIDENT AT COUNTY LINE CROSSING

Colored Man From Waukegan Is Struck by Fast Train; Worked Here

Eugene Poole, colored, a resident of Waukegan, met instant death Friday night when he was struck and hurled several feet by a northbound North Shore Line two-car train at the County Line road crossing, south of Highland Park.

According to the crossing watchman he had already lowered the gates but Poole apparently not wishing to wait until the train passed went under the barrier and started across the track, the train striking him.

Poole was employed by the Lane Construction Co., as a laborer. The camp is located a short distance away from the scene of the fatal accident.

BRIEF NEWS ITEMS—N S P

Gov. Len Small has issued a warrant for the return to Minnesota of Alfred E. Whiteman of Zion City, charged with bigamy in that state.

Erection of a large and modern hotel building on the northeast corner of County and Water street in Waukegan may be carried out in the near future according to reports that are current in building circles in that city.

BOHEMIAN CHILDREN LIKE SKI-RUNNING

Ski-running is becoming popular with school children of the mountain districts of Bohemia, and the teachers are encouraging them in it. Some of the schools have accumulated stocks of from 30 to 50 pairs of skis and the children have been taught to use them.

Frequent contests of speed and dexterity are held. Not only do the skis give valuable physical exercise but they contribute directly to the good of the schools. Formerly the children were often obliged to stay at home on snowy days; now they take great pleasure in skiing to school.

HOME INSULATION EASILY EFFECTED

Houses Made Warmer by Use of Dry-Fill Gypsum; How It Is Utilized

Home-insulation generally is regarded as a complicated system that can only be installed by an engineer, carpenter or some other person equally expert in the matters of home-building.

But because some insulating systems need to be installed by experts, there is no reason why every homeowner shouldn't enjoy the benefits of insulation, for there are systems that the home-owner can install himself and that are low cost.

An example of these simply installed insulation systems is dry-fill gypsum. This material is a fluffy, asbestos-like substance that comes in sacks and that simply is poured dry into place.

If an attic is unfinished, this dry-fill gypsum poured over the lath and plaster of the rooms below will provide an effective blanket-barrier to the escape of heat through the roof, for heat rises, and if it encounters an impassable barrier it will be kept within the house.

When such a job has been completed, the home owner not only has one of the most effective insulating systems yet developed, but he has put fire-stops wherever the dry-fill gypsum has been installed, for gypsum is incombustible and is one of the most widely used fire-proofing materials.

Dispatches from Greece say that the republicans won the election there last week. We now expect to read that Pat Harrison has made a speech telling us that Greece has gone to the dogs.

These French are hard to please. A few weeks ago they were worrying because the franc was dropping in value and now they are complaining because it is going up.
