## TELLS HISTORY OF PIONEER CHARACTER

FOUNDER RHODE ISLAND

Roger Williams Proponent of Religious Liberty Noted Colonial Figure Says Magazine Writer

Americans generally revere Roger Williams as the great proponent of religious liberty and the founder of Rhode Island. Comparatively few are aware of the fact that he was a diplomat as well and of great service to the colonies in a diplomatic way. In an article in the current issue of the National Republic Quaker O'Taylor discusses the interesting events of the great founder's life in an entertaining way. Mr. O'Taylor says in part:

**Early Experiences**  
"It was in January, 1636, when the Declaration of Independence was nearly as far in the future as it is now in the past, that Roger Williams was compelled to leave his wife and babies and tramp through the snow-covered forests with no other companions than the wild beasts who were ready to devour him. Years later in writing to a friend about this unhappy experience, he said: 'I was sorely tossed for fourteen weeks, in a bitter winter season, not knowing what bread or bed did mean.'  
"He was finally saved through the aid of Indians toward whom he had ever assumed a kindly and generous attitude. In referring to this experience, he recorded: 'These ravens fed me in the wilderness.' Chief Massasoit, of the Pokanoket Indians, gave him a tract of land on Seekonk river, where he was joined by old friends from Salem, and a settlement started.

**Founded Providence**  
"But upon receiving friendly hints that complications were liable to arise with the Plymouth colony, he pulled up stakes and moved to the present site of Providence, and in June, 1663, started a settlement that is still going strong. The land in that section was cheerfully given to him by his old friends, Comanicus and Mantonomah, chiefs of the Narragansetts. It was well for all of New England that Williams was on such friendly terms with these Indians and exercised so much influence over them, otherwise all of the settlers might have been scalped, their crops destroyed. He easily prevailed upon the powerful Narragansetts not to join the league being formed by Pequot sachem Sassacus for the purpose of destroying all English settlements. It is claimed that no other wise man in the New World could have put over this important piece of diplomacy. During the Pequot war, the very men who caused the banishment of Williams called upon him for advice and assistance, which he cheerfully gave."

## AIRPLANE DUSTING OF PEACH ORCHARDS

Ten Thousand Trees Treated In About Two Hours by This Method, Report

The latest crop to receive treatment by the airplane dusting method for controlling insect pests. According to a report received by the Bureau of Entomology of the United States Department of Agriculture from its field station at Fort Valley, Ga., this process was tried for the first time in March of this year. Airplane dusting for cottonfields has been a demonstrated success, and the outcome of this type of control for insects affecting peach trees will be awaited with interest.

It took an hour and fifty-five minutes to dust 10,000 peach trees with a mixture of arsenate of lead and hydrated lime. The time recorded included all trips to the landing field to refill the hopper. For several months the bureau representatives at the Fort Valley laboratory have been giving attention to the perfection of the technique for using airplanes in this way, with the co-operation of those who have had previous experience in the work at the boll weevil laboratory at Tallulah, La. It has been necessary to make adjustments of the feeding mechanism of the planes so that the heavy dust used for peach insect control work would be evenly distributed. A thousand acres of peach trees in Georgia will be treated by airplane during the season, under the supervision of the Fort Valley laboratory. It is expected that this work will yield valuable data on the results, cost of operation, and other points.

## HUMPTY DUMPTY NOW IN BIG BUSINESS

Humpty Dumpty has been launched into big business. His days of slipshod marketing are on the wane. Some 70,000,000 dozen of eggs are marketed by farmers' co-operative organizations in the U. S. last year, the business running up to \$22,000,000. This estimate by the bureau of agricultural economics cover 156 farmers' organizations. Nearly 90 per cent of the business was handled by 30 associations in 10 states: Missouri, Minnesota, California, Connecticut, Oregon, Texas, Washington, New Hampshire, New York, and Utah.

Uphold the administration by voting "YES" next Monday.

## BIRDS LEADING IN WAR UPON INSECTS

SHOULD HAVE PROTECTION

One of Nature's Important Agencies In Keeping Down Horde of Parasites; Enemies Are Numerous

Insects and grubs cause an annual loss of \$800,000,000 to the agricultural interests of the United States, and our people pay another \$800,000,000 each year trying to get rid of these pests. This heavy expenditure, the burden of which is borne in large part by farmers, fruit growers, and gardeners, would be reduced if adequate provision were constantly made for the needs of our valuable insectivorous birds, including protection for their lives.

**Birds Help**  
Birds, according to the Biological Survey of the United States Department of Agriculture, are one of nature's important agencies for keeping down the overwhelming hordes of insect life. Nest boxes should be put up on shrubbery planted to make up for the disappearance of the hollow trees and young wild growth in which the birds once built their nests. Water for drinking and bathing, should be supplied in the summer season and shelter and food provided in winter. Protection of birds from their natural and unnatural enemies is not the least important consideration.

The boy with the air rifle, the native or the foreign-born adult with his gun, the red squirrel and other small animals, the rainstorm and the windstorm, and the house cat all take their toll of wild-bird-life. Years ago the depredations of the cat on birds caused little concern, but now that probably twenty-five million cats blanket the United States, people are waking up to the increasing necessity of protecting birds against them. It is not necessary that householders part with their pets, but these potential bird destroyers should be kept from unduly increasing if the effort is to be made more effective to prevent them from killing the song birds.

**In Nesting Season**  
During the nesting season especially watchful care is needed, particularly at the time when the fledglings, unable to make full use of their undeveloped wings, flutter to the ground. The sight of helpless young birds hopping across the lawn excites the predatory instinct of even a well-fed house cat. In a short time the wings of these birds will have grown strong enough for them to fly a little way, when the danger of being caught is lessened. Until the young birds can look out for themselves the cat should not be allowed to leave the house, unless closely watched.

Roosevelt said, "It is the duty of every man, woman and child to protect the birds." Everyone who realizes the incalculable number of insects which even one bird will destroy in a season should be willing to take some pains to protect these charming and useful little aerial allies of the farmer and orchardist.

During the nesting season of our wild birds the United States Department of Agriculture asks that all persons try to protect from harm from all sources the birds which live in the vicinity of their homes and fields.

## CUSTOMER OWNING OF UTILITIES LAUDED

Professor Says This Plan Will Have Far-Reaching Effect; Benefits

The rapid diffusion of ownership, including customer and employee ownership of public utility stock, will have far-reaching results, according to Dr. Thomas N. Carver, Professor of Political Economy at Harvard university.

Summarized, the results, Professor Carver says, are as follows:

First, the elimination of class-conscious conflict between laborers and capitalists; in other words, a blending of the laborer and capitalist classes.

Second, a real democratization of industry, as distinguished from spurious democratization in the form of public ownership.

Third, the elimination of absentee ownership from most of the well-established industries.

Fourth, the development of a new interest in their work on the part of the workers and a new interest in the success of the industries that serve them on the part of the customers.

Fifth, the elimination of that bane of constructive business, the cheap politician who fattens on class antagonisms.

Congress should be given credit for not monkeying with the length of women's skirts.—Jacksonville Times-Union.

In 10,128 manufacturing establishments surveyed by the Department of Labor in July, there were 2,975,690 employees receiving wages amounting to \$76,919,002. Both the number of employees and the wages received were larger this July than in July, 1925.—Washington Post.

Uncle Sam, now commonly known abroad as Shylock, is the same Sam who was ridiculed by the powers in 1901 for presenting so moderate a bill to China.—Detroit News.
