### ELECTION CONTEST SHOULD BE DROPPED

Continued from Page 1

ed the case, and it is safe to say that it represents the public mind, as a whole fairly well.

**Harmony Requisite**  
What is needed is harmony in the city council and hearty co-operation for the best interest of Highland Park, say those who deprecate the continuance of this matter, which can do no good to anybody. Nobody believes that any of the defendants in the case were a party to anything fraudulent in the election, and it is safe to say that the petitioners, themselves do not hold such opinion. But it is a difficult matter for the men who are made defendants in this matter to carry on under the circumstances. They are making every effort to work in co-operation with the mayor for the general welfare, holding the interests of Highland Park paramount to any other influence, their friends declare, and naturally the fact that they are being placed in the position of defendants in a contest of their election does not help matters.

**Time To Drop It**  
It is the belief of the Press that the best interests of Highland Park will be best served by abandonment of this contest. The election is past and the decision was rendered then by the voters. The thing to do is to go on in united effort for the welfare of the community as a whole. The people of Highland Park are interested in having civic affairs well handled without discord, in as far as possible; they are not interested in an election contest dragged through the courts for months, with no possibility of any good to the community as a whole resulting.

**Mayor's Opportunity**  
The time to drop this controversy was before it started, and the sooner it is dropped now, the better for the community. Mayor Lewis will gain friends and prestige if he will use his influence to eliminate dissension and help establish harmony and united effort in the council and out of it for the welfare of Highland Park.

### FIGHT PICTURES TO REMAIN OVER SUNDAY

To Be Shown Daily Until That Night at Pearl Theater; Huge Crowds

Because of the widespread interest and the huge attendance this week, the Dempsey-Tunney pictures will be continued at the Pearl theater daily, afternoons and evening, during the rest of this week and including Sunday afternoon and night. An interesting feature of the opening night of these pictures was an illuminating talk by Mr. George Lytton, one of the judges of the fight, whose explanation of various points was a great help to intelligent understanding of the excellent movie of the fight shown at the Pearl.

The Dempsey-Tunney fight pictures brought out the greatest crowds ever assembled in the Pearl theater. In spite of the rainy weather, there have been crowds upon crowds waiting patiently on the rain-soaked pavement in front of the Pearl for a chance to see these official motion pictures of the greatest and largest sporting event ever staged.

A great deal of the interest centers around the seventh round, the round in which Dempsey floored Tunney for a long count. The pictures of this round have elicited much excitement and boozing of the referee by the audience at every performance. The slow motion camera clearly registers every move made by contestants and referee and has caused considerable commotion by its revelations. One fan, after seeing the pictures, remarked that Dempsey and Referee Dave Barry went out for a sandwich while Tunney was recuperating.

It is also rumored that innumerable wagers have been settled by the revelations of the camera. Never before has there been such interest in a motion picture. After seeing it, we're still wondering who did win the fight.

It, as the former boy emperor of China says, China's main trouble is too many rotten generals, some Central American countries know just how she feels.—Indianapolis News.

### SEWAGE TREATMENT PLANTS DESCRIBED

Continued from Page 1

sewage and which may thrive and multiply therein. When such bacteria come from sick persons they are termed pathogenic or disease bearing bacteria and may hazard the safety of drinking waters and bathing beaches. Such organisms are removed in part by sedimentation and die off somewhat in the filtration process. They are best removed, however, by actual disinfection which is accomplished in the plants of the North Shore Sanitary District by liquid chlorine. Sometimes such bacteria are within relatively large suspended solids by which they are protected from the action of the disinfectant. Therefore, it is good practice to first remove the settling suspended matter and to treat the clarified sewage with the liquid chlorine.

#### Purification Processes

The purification processes in use are, in effect, natural processes under control. The term "nitrogen cycle" is now quite generally understood. Animals live on growing plants and through their discharges, fertilize the fields where the grain, hay and other living plants grow. Thus, there is a continuous cycle, each form of plant or animal preparing the nitrogen for use by the next in rotation. When the solids from the sewage are stored as sludge for several months, the residual material is quite similar to humus or forest mould. It has undergone much the same process that leaves, branches and other dead and thoroughly rotted organic matter have gone through in becoming forest mould. The sedimentation plants of the North Shore Sanitary District have capacities for retaining the sludge about six months during which time it is worked over into a good humus soil. Sludge from the two treatment plants in Highland Park has been placed on the turf of the municipal golf links. The sludge from the Waukegan plant has been taken to Winthrop Harbor. The sludge from the Lake Forest and Highwood plants is being used for fertilizing the grounds about the plants. A year ago the sludge from two plants was sold for \$100.00 at each plant.

#### Operation of Filters

In nature the soil organisms oxidize or nitrify organic matter into forms of nitrogen suitable for plant food. The filters of the North Shore Sanitary District provide places where such organisms grow in abundance and where they are brought into contact with the organic matter of the sewage. When examined under a microscope, the surfaces of the filter stones are to be alive with millions of these small organisms. Some of the organisms can be seen by the naked eye, as for instance the larva of the small filter fly. As the clarified sewage trickles over the surfaces of the stones in the filters these organisms work it over into a staple liquid in which the nitrogen occurs in a form suitable for plant life. When it is discharged into a stream the lower plant and animal forms feed on it and themselves grow to food for the higher forms and these in turn are fed upon by fish. Thus, the nitrogen cycle is completed.

#### Use of Chlorine

The treatment of the sewage by liquid chlorine is merely a killing off of the bacteria by a sterilizing agent, such as liquid chlorine. Fortunately most of the disease producing organisms are more readily killed than the others because their life cycle in the intestinal tract renders them less hardy. The efficiency of disinfection depends upon the amount of the dose, the absence of coarse suspended matter, the thoroughness of mixing chlorine and sewage and the time of contact. All of these features are included in the designs of the North Shore Sanitary District plants.

### ROBERT LAUTMAN SWIMS ACROSS LAKE GENEVA

10 Year Old Son of H. W. Lautman Makes Record Swim Few Weeks Ago

Robert Louis Lautman, 10 year old son of H. W. Lautman, of Highland Park, swam across Lake Geneva from the Lake Geneva Yacht club pier to the pier at Conference Point, a distance which is approximately two and one-quarter miles. The distance was covered in one hour and 12 minutes.

Two row boats accompanied Robert on his swim across the lake; H. W. Lautman, his father, who maintains a summer residence near Williams Bay, in one boat, and Hubert Stanley Noble in the other.

Mr. Lautman, Sr., has been making inquiries around the lake and states he has yet to find anyone Robert's age who has accomplished as much around Lake Geneva. At the age of nine, he swam from the Conference Point pier to the pier at the Y. W. C. A. camp. With these accomplishments ahead of him, Robert feels certain that next year he will be able to swim from Conference Point to Fontana.

The Great Orator has decided to leave out that passage about a return to "old-fashioned Jeffersonian principles" since a loud unidentified person in the back of the hall wanted to know what they were.—Detroit News.

NEW Y.W.C.A. ASSOCIATION HOUSE

MEMBERS OF THE BOARD OF DIRECTORS OF THE HIGHLAND PARK Y.W.C.A.

First row (seated), reading from left to right: Mrs. L. R. Rigdon, Mrs. W. N. Stafford, Mrs. Carl Pfanstiel, Mrs. W. A. Alexander, Mrs. Emory Hall, Mrs. Fred Clow, Miss Rebekah Pocock. Second row (standing): Miss Adele Everett, Mrs. E. T. Murfey, Mrs. J. H. Dingle, Mrs. Frank Pitt, Mrs. Carl Bingham, and Mrs. Albert Nason.

### MUCH ENTHUSIASM FOR Y. W. CAMPAIGN

Continued from Page 1

school in New York City, taking the summer course in Girl Reserve work. She has been a Girl Reserve herself and an adviser of Girl Reserve clubs.

#### New House Secretary

Mrs. William M. Uhl comes as the new house secretary. She has had fine experience in this line of work coming here from Eleanor club No. 3 in Chicago. Before that she was house mother at Chi Omega sorority house at the University of Missouri. Keep in mind from October 3 to 8

the slogan of the Y. W. C. A., "Growing with Highland Park" and help this association to prove it.

#### Executive Committee

The campaign executive committee is composed of the following: General chairman, Mrs. W. A. Alexander; co-chairman, Mrs. Carl Bingham; chairman of initial gifts, Mrs. W. A. Alexander; chairman of publicity, Mrs. E. T. R. Murfey; chairman of lists, Miss Rebekah Pocock; chairman of luncheons, Mrs. Charles Benson; co-chairman, Miss Adele Everett; auditors, Mrs. Fred Clow and Mrs. O. L. Oleson; pianist, Mrs. Charles Pardee.

#### Report of Survey

Why a Y. W. C. A. in Highland Park? is a question often asked, and

the following report of a survey made in April, 1926, by Helen E. Partridge in regard to the number of women and girls employed in this community and vicinity is given in answer to this query. The figures from the survey are as follows:

Trade and transportation—Saleswomen, 42; telephone operators, 54; telegraph operators, 1.

Domestic (outside the home)—Hotel or hospital maids, 17; matrons or deans, 2; kitchen or restaurant workers, 26; waitresses, 28; in 1,355 homes probably 300 domestic, among them Scandinavian, Swedish, Italian, other foreign born young women. Fort Sheridan, Highwood and Deerfield figures not included, but girls use Y. W. C. A. in Highland Park.

Clerical—General office workers, 20; bookkeepers or stenographers, 33; secretaries to principals, 3.

Professional—Librarians, 4; nurses, 12; nurse helpers in the hospital, 12; social workers, 2; teachers, 92; doctors assistants and helpers, 6.

Laundry workers—45.

Business not elsewhere classified—Hotel owner, 1; hairdressers, 12; milliners, 3; cashiers, 28; bindery girl, 1; government clerks, 3; office executive of hospital, 1; assistants in photograph studios, 2; position in banks, 14; employment bureau, 2; others, 3.

Total not employed—743.  
This report was made from the information collected by the surveyor. Practically every business concern was visited by her personally, and the names of the women employed secured. In most of the stores and offices the girls work from 8 to 9 hours. There are comparatively few stores that employ more than two or three girls. The telephone company employs about fifty operators.

#### Housing and Lunch Rooms

At every store visited the question was asked, "Do the girls live at home, or do they room and board?" It was found that the majority of the girls live at home. About 100 girls live at home, about 25 room and board, and about 75 live in other North Shore towns. Many of the girls go home for lunch, others carry their lunches from home and others eat at the various restaurants in Highland Park. There is a cafeteria, a tea room and several restaurants, all centrally located. All of these serve good meals. (The figures given above include the girls working in stores and offices. They do not include teachers, telephone operators and laundry workers. About half of these live in Highland Park.)

A special objection to Senator Heflin's proposal to have the congressional proceedings broadcast is that there would be more speeches and longer speeches than ever from Senator Heflin.—Springfield Republican.

There are all sorts and brands of gasoline on the market but doubtless the best kind is that which comes from contented oil wells.

### He Likes This Plan

Many people dislike to keep records of their income and expenses. But we have a depositor who has a plan that works itself, he says. It is good, too.

He makes his checking account with us do the work for him. He deposits all his income as fast as he gets it. His bank book shows his total income at all times.

He writes checks for all his expenses. Even for pocket money he makes a check for "Misc. Exp." His cancelled checks give a record of his expenses.

He sorts his old checks into several piles when he wants to know how much he is spending for food, clothing, fuel, etc. It is no trouble at all.

Many like this plan. It is only one of the benefits of the checking system.
