## **NEED NAVAL BASE** IN HAWAII IS URGED

BY CONGRESSMAN W. HULL

Illinois Member of House In Speech Points Out Value of Islands in Defense of Nation

That the United States should create the "greatest navy base in the world" at Pearl Horbor, Hawaii, dredge deep channels leading into this harbor and deepen it generally to facilitate free maneuvering movements and anchorage for our greatest ships was the conviction of Congressman William E. Hull, of Ill., addressing the House today.

Congressman Hull recently completed a thorough inspection of the Hawaiian Islands. He believes that the United States Gorvernment is neglecting its share of the expense of creating proper harbors and breakwaters at all the principal island of the Hawaiian group, a task which the territorial government nas already begun with vigor.

"Pearl Harbor is a Navy base, yet it is not the Navy base," said Mr. Hull. Pearl Lochs which make up the naval harbor form a beatiful sheet of water though deceptive as to depth and while a channel exists which is being deepened and widened to accommodate the larger naval vessels, he asserts this channel will not solve the problem of providing an area for assembly of the fleet in time of stress.

Could Be Reclaimed

"The Fort Kamehameha Reservation," said Congressman Hull borders the ocean on the Honolulu side at Pearl harbor and extends for three miles along the beach. Most of this area is swamp land which could be reclaimed if Pearl Lochs were dredged and deepened to accommodate the fleet and the dredgings were placed in the swamp and this waste area reclaimed for an army aviation field.

At present, explained Mr. Hull, the Army and Navy are sharing Ford Island within Pearl Harbor, as an aviation field. He suggests that Ford Island be made exclusively a naval flying field and an army field created on the Kamehameha reservation with a -runway of sufficient length to permit of heavily loaded . planes taking the air. Such a runway, he disclosed, does not now exist anywhere in the Hawaiian islands.

Praising the agricultural wealth the world. and development of the islands and declaring that the people are true however, told Congress today:

The debits arising in maintaining as it does a very considerable portion of the Army on the Island of Oahu (Honolulu).

"The naval base is at present sorely in need of berths for ships along the Navy Yard waterfront and many other improvements vitally needed," he said.

The rapid growth of aviation as a recognized arm of defense should preclude, said Mr. Hull, that the Army and Navy aviation should be cramped on Ford Island which, in his estimation, should be given to the Navy for its exclusive use and permit the Navy in addition to create there facilities for assembly, ship repair and training centers.

Once this is done, he told his colleagues in the House, this nation will be safe from any attack in the Paci-

## MINE EXPLOSION IS WORST IN LATE YEARS

Blast at West Frankfort, Ill., Results in Death of 21 Lives; Probe

Explosion recently of gas in Mine No. 18 of the Industrial Coal Co., at West Frankfort, resulting in the loss of twenty-one lives, is the most serious mine accident reported to the Department of Mines and Minerals in recent wears. Lives of approximately 600 miners were endangered.

Director A. D. Lewis, Department of Mines and Minerals, left immediately for the scene of the accident and took personal charge of the inquiry. Trained workers from the various mine rescue stations were at once ordered to Johnson City and took charge of the locating of the victims of the catastrophe.

Charges have been made, and are being investigated by the state that a production contest between mines operated by the Peabody Coal Co., was responsible for the explosion, miners working under dangerous gas conditions in order to establish hoisting records. This charge is denied by officials of the company, asserting Mine No. 18 regularly produces from 800 to 1,000 tons daily in excess of that of any other shaft of the com-

BANK GIVES OUT SURVEY CONDITIONS IN U. S.

January Letter of Big New York Financial Institution Is Interesting in Review of Past Year

The course of business during 1921 was characterized by a slow start, a gradual rise to satisfactory levels during the spring, a seasonal recession during the summer, a disappointing recovery during the fall and a decrease of activity in the final months, according to the monthly review of The National City Bank of New York, which points out that the year closes with evidence of considerable slack in the industrial situation. Production and trade have been large despite the recent decreases in some lines.

Unsatisfactory

"The most unsatisfactory feature of business in 1927 has been the decline shown in business profits," the review says. "This is the result both of the further decline in prices and of the decrease in volume in many important lines. During 1926 and the first half of 1927 business was enabled to make a good showing as to earnings in spite of falling prices, because volume was still holding up and unit costs of production could be kept down. With a slackening in the rate of output such as occurred later in the year the effect on earnings quickly became pro- of bank credit cannot go on innounced. The United State gained labout \$56,000,000 of gold in the first half of last year and lost something like \$200,000,000 in the second half by excess of exports, making a net loss for the year of \$151,000,000. The review finds explanation of the fact that numerous countries are able to take gold from us in the unprecedented volume of foreign borrowing here, this being the cheapest money market of large capacity in

and a desire to take profits might induce such action at this time. On the other hand, foreign investors have been freely buying from us the foreign loans placed in this market.

"Foreign deposits in American banks and foreign investments in the short term money market are subject to reduction or withdrawal, and the amount of foreign funds employed or on deposit in New York is farger than before the war, but the position of New York in world finance is different. Although it is quite possible that these funds may be reduced in amount, it is improbable that such changes will be of a sudden or disturbing character. The other factors in the balance of international rayments are not subject to sudden changes. Indeed, there is reason for thinking that the time for abrupt changes in trade and exchange relations has gone by. All Europe appears to be firmly established in permanent relations on the gold basis."

The bank discusses at length the domestic credit situation, pointing to the large expansion of loans over past year and particularly to the fact that this increase has been almost wholly in financing the purchase of stocks and bonds. It emphasizes the fact that a constantly increasing supply of bank credit has been the most important factor in the stock and security markets, and counds a warning that the supply
