**2 OUTSTANDING
ADVANTAGES**

**THE
CABINET IS
ALL-STEEL**

Of the many advantages of General Electric Refrigerators, two are especially vital—the hermetically sealed, on-top mechanism and the all-steel warp-proof cabinet.

The mechanism in any electric refrigerator has but one purpose—to absorb heat from the food. It must be permitted to radiate that heat rapidly just as heat is conducted away from the engine of your car. As heat naturally rises, it can be radiated from the top of the refrigerator. To place the radiating coils anywhere else cuts down their efficiency and increases the cost of operation.

Mounted on top, away from dust and difficulties, permanently oiled and hermetically

**ALL THE
MECHANISM
IS ON TOP**

sealed, this arrangement of the mechanism leaves maximum space available within the cabinet for food storage.

And now has been added the new all-steel cabinet. Built like a safe, it can't warp—it operates on the least amount of current—its doors always retain their perfect fit, which shuts out heat. In six sizes at prices surprisingly low. The small family size is but \$215, at the factory. Come in and see them and let us tell you our plan of conveniently spaced payments.

Listen in on the General Electric Hour, broadcast every Saturday evening, 8 to 9 Eastern Standard Time, over the N. B. C. network of 42 stations.
