

**Predicts Bond Issue
for County Hospital**

Careful survey of the needs at the county hospital with an eye to the future, and an eventual bond issue to provide an adequate structure, will be the ultimate solution of the problem of caring for the county sick, according to Supervisor Arthur W. Vercoe of Highland Park, chairman of the finance committee which

is extremely influential on matters of expenditure before the county board.

"The actual solution would be the construction of a large hospital in front of the present buildings through a bond issue but I do not believe a bond issue would be propitious at this time," Vercoe stated.

He pointed out that the county hospital had been a drain on taxes since it was instituted and that it

would likely continue as such but that the situation would have to be faced.

The people who have lost money in the textile business due to the short skirt style, should be able to make it up in the silk stocking trade.

With the smaller sized currency in use, the people who take pleasure in flourishing a wad of bills around will have to collect more of them now.

**BRAESIDE SCHOOL
OF MODERN TYPE**

Especially Designed for Practical Use in Education of Ravinia Youth

Looking more like a country mansion than an educational institution, the Braeside school at Pierce, Brownville and Lincolnwood roads, Highland Park, is a comfortable warm buff stucco, red tile-trimmed, above a deep base of rough-hewn limestone. Already a fairly large building, the school is only a third the size planned for eventually, according to John S. Van Bergan, architect.

Individual Design

Mr. Van Bergan formerly was associated with Frank Lloyd Wright, and the originality of design which characterizes the school is individual.

Inside the light, airy structure, with its leaded casement windows, the children of kindergarten and the first four grades who will gather in the building next September will be greeted not only with cheerful, limestone-trimmed fireplaces, but also with an entirely modern arrangement of rooms.

Each classroom is a laboratory unit, with a workroom adjoining the main classroom; a cloakroom fitted with low benches and compartments for rubbers and umbrellas, cupboards divided into compartments in which each child may keep the projects upon which he or she is working, and a spacious cloakroom for the teacher. The room which Clark G. Wright, the superintendent calls the workroom is fitted with hot and cold running water, and with gas. Here the children will model in clay and build doll-houses or boats to their heart's content.

Color Scheme Bright

The wood trim is a greenish-gray stain; the walls are a warm cream color and across the ceilings of halls and classrooms are stained rafters and joists brightened with orange blocks. All the lighting fixtures are of modern design in wrought iron with opaque or semiopaque cylinders and triangles of glass for shades. In the classrooms the lighting is indirect from wall brackets. An automatic oil heater will furnish warmth.

Mr. Wright, who worked with Mr. Van Bergan in planning the school, has seen Ravinia's school system grow from a four-room red brick building housing forty students to three buildings housing well over 500 students. The community lives up to its reputation as the home of several well-known artists by the beauty of its community buildings, Mr. Wright pointed out.

Before this latest addition to Ravinia is opened in the fall, the school yard will be added and flowers will be growing in the boxes which flank the entrances. In another year or two, another one-story wing will be added to the structure which will house some of the upper grades.
