# This Oil Burner "CLOSE-UP" TEST

This announces a modern automatic oil burner that permits, and invites, an unusual test:

Sit within six inches of it, and try to tell whether or not it's in operation. Try to catch any sound at all. Try to sense any vibration. Try to detect any odor.

It is the IMPROVED CHALLENGER model KLEEN-HEET. The very flower of long and successful experience in heating homes. (Of course listed as standard by Underwriters' Laboratories.)

Fully automatic of course. Specially designed and perfected for the home of average size—or smaller.

It brings first-cost down to a new low level for equipment of this character—very definitely within reach of any home-owner. Note how small an amount is required.

□ □ □ □ make it!

It is, on every count, one of the truly great oil burners on the market today—and there are, of course, other good ones besides KLEEN-HEET.

Come in and see it. Do this before doing anything else about your next winter's heat or fuel supply. You will learn some new things. Come in—telephone—or mail a post-card. Right now is the time for such action.

"R.T.B." — "Ready to burn"—in your basement—complete!—no extras. 12 full months in which to handle it.

Call or write our local representative for our special offer
