New Steel Towers on Power Line Temporary

The many queries of Waukegan and Lake county residents living in the vicinity of the Public Service company's tower line concerning the presence of a third row of steel towers along the right-of-way, was explained from the Waukegan office.

The new steel towers are merely temporary and are used while the other towers are being re-coppered after 7 years of service. The supple-

mentary towers are set up for a distance of two miles while the work is being done on the old towers. They are then taken down and set up further down the line, the operation being duplicated until the repair work has been completed all along the line from Waukegan's north flats plant to Evanston.

The new towers are not to carry "juice" from the new north plant unit which is nearly constructed. This was the assumption of many residents who have noticed the supplementary towers going up.
