

You Can **SAVE**

from 15% to 35% of Your FUEL!

Our Written Guarantee is your assurance of a definite saving whether you heat with

Oil — Gas — Coal

Every slight wind variation has a definite effect on your heating plant. It is therefore an impossibility for a hand set damper control to give you anything approaching efficient operation.

Your heating plant is designed to absorb the heat furnished by oil - gas - or coal. Much of this heat is so rapidly drawn through the furnace by excessive drafts that a tremendous waste results.

Hot Chimneys Waste Heat.

The Field Fuel Saver with no attention automatically adjusts itself to every change in draft and weather conditions, maintaining exactly the right draft that your heating plant

requires—and saving 15% to 35% excess heat, now escaping up the chimney stack, a total loss.

In many cases the guaranteed saving is sufficient to pay for the Field Fuel Saver from one to three times each year.

Without obligation our engineer will make a survey of your heating plant—and report his findings together with an estimate of how much the Field Fuel Saver can reduce your fuel bill. Let him do this now as nearly 40% of the heating season remains with those windy March and April days that cause unnecessary waste of fuel.

A Few North Shore February Installations
