

**New 1935 Plymouth Is On Display Here**

The new 1935 Plymouth, announced as a "high speed safety car" with a high compression engine, new type of body construction and a "floating ride," is on display here at Jos. B. Deibler's Chrysler salesroom.

Mr. Deibler said that Plymouth engineers, pioneers in the development of the all-steel body and hydraulic brakes, have made important improvements to build additional safety in the new Plymouth.

The car is lighter, stronger and has a lower center of gravity than previous models, he said. The torpedo shaped body fits down over the frame and is bolted to the side members and X-member of the frame at 46 different points, instead of being mounted on top of the frame and bolted at 18 points, as in the past.

The "floating ride" is the result of four recent engineering developments — balanced car weight, thin leaf springs made from a new steel, double action shock absorbers, and a side-sway eliminator.

The weight of the car has been re-distributed, with the engine moved forward 5 1/2 inches. Now the weight is the same on both springs. Previously the rear spring supported 60 per cent of the weight and the front springs supported 40 per cent.

The Plymouth engine develops 82 horsepower at 3600 p.m. Engineers claim 20 per cent more power and greater gas mileage.

Streamlined in design, the new Plymouth is the largest and most stylish car ever presented by the Plymouth Corporation. The torpedo shaped all-steel body is three inches wider than previous models. The car is three inches longer, 189 inches from bumper to bumper.

The new body enabled engineers to build more room in the bodies. Seats are three inches wider. The floor has been lowered 3 3/4 inches, permitting more leg and head room.

The new style Plymouth is a "style" car designed to capture the imagination of modern motorists. It is streamlined from its massive new radiator shell back over the slanting windshield to the tapering (beaver-tail) rear deck. Ventilating hood louvers are under the fenders. Inside as well as outside the car gives an impression of room and comfort. It has a cove ceiling, a new treatment that eliminates seams and braiding. The upholstery is a new patterned broadcloth. On de luxe models, mohair is available as an optional item.

A host of quality refinements

found on the new car include — a gyro-silent transmission, a new ventilated clutch, an air-cooled generator, aluminum alloy pistons, silent U and rubber cored spring shackles, valve seat inserts, roller bearing universal joints, four bearing crank shaft, a double-drop rigid-X frame and a new simplified system of single control ventilation.
