STATE BOARD ACTS TO END POLLUTION OF LOCAL STREAMS

Determined that pollution shall be removed from the streams in the Chicago metropolitan area and at the same time co-operating with the offenders, the State Sanitary Water Board, in its recent hearings in Chicago, gave the villages of Mount Prospect, Algonquin, and the St. Mary's Mission, St. Ann's Home for the Aged, and Holy Ghost Academy at Techny, Ill., each 90 days in which to submit to the Sanitary Water Board definite evidence in abating their pollution. If, at the end of this period, definite progress is not shown by these offenders a formal

abatement order will be forthcoming. In each instance it was explained to the municipalities and institutions that while this extension of time was given in an endeavor to help work out the engineering and financial details of the necessary project that definite action was expected by the board. The representatives of these municipalities and institutions discussed in detail with the board their problems and were assured by the members of the board that the fullest cooperation would be given to these municipalities and institutions.

This is the third of a series of hearings held in the Chicago area for the convenience of municipalities and institutions located in the northern part of the state and in each instance the board has taken very definite action as part of its program of ridding the streams in this

area from the sewage filth which they are now receiving. These hearings and subsequent action come as the result of stream pollution surveys carried on by the Sanitary Water Board engineers.

Much encouraging progress has already been made for already several projects have been definitely assured and it is hoped, as pointed out during this hearing, that each of the offenders will at once apply to the Federal government for aid in the working out of the financing of the necessary projects. This action state to their natural beauty and usefulness comes as welcome news to the thousands who have long seen these beautiful waters polluted by filth from various municipalities and institutions.

As one member of the board pointed out, the proper disposal of a community's waste is after all a problem in municipal housekeeping and each municipality and institution should realize its obligation to the rest of the community and its downstream neighbors by providing adequate facilities for the treatment of its sewage.

The members of the Sanitary Water Board are: Frank J. Jirka, M.D., director of public health and chairman of the board; Charles F. Thomson, director of conservation; Walter W. McLaughlin, director of agriculture; Robert Kingery, director of public works and buildings; and Clarence J. White, manufacturer. C. W. Klassen serves as acting technical secretary to the board.
