MODERN GAS RANGES MAKE "WATERLESS" COOKING EASIER

"Waterless" cooking really is steam cooking, and it can be done more easily on a modern gas range because of the flexibility of the new burners. This type of cooking isn't difficult. The natural moisture in most foods, plus a little liquid in the bottom of the utensil, furnishes enough steam to cook a surprising volume of food. Any vessel with a tightly-fitted lid may be utilized. A high flame may be used until steam appears . . . a simple turn of the valve until a tiny simmering flame appears does the rest.

"Waterless" cooking retains health-giving minerals in foods, reduces waste and prevents excess kitchen steam, which might carry particles of dirt and grease to your walls and curtains.
