

**Christmas Seal Receipts Below Last Year's Mark**

In spite of the steady improvement of our diagnostic methods only 18 per cent of tuberculosis cases admitted to Sanatoria are found to be in the early stages of the disease and this means there are far too

many unrecognized cases in every community infecting their families and neighbors. Only by finding every single case can the disease be stamped out. The work of the Lake County Tuberculosis Association is to find these unknown cases in our community. We are constantly seeking examinations for all suspects, and examinations even where the disease is not suspected are important. Ev-

ery case whether active or inactive should be traced to its source, examining all contacts that the source might be controlled. We must provide home visiting not only for the active cases who are not hospitalized, but for all contacts. They should be educated as to the proper care in order to prevent their having the disease, emphasizing periodical examinations in our clinics.

All this means that the cooperation given the Christmas Seal last year must be continued this year in order to carry on the same program. It would be a matter of grave concern if any part of our work should have to be discontinued. The receipts from the Seal Sale were \$2,112.03 on December 6th., \$872.75 less than on the same date last year. Every contribution large

or small is of great importance in raising the necessary fund to finance the work of our association. Aid the sick and protect the well by buying and using Christmas Seals. The Federal Recreation Projects in the Chicago and surrounding areas are holding a handicraft exhibit on the second floor of the Mer-

chandise Mart Building in Chicago Friday and Saturday, Dec. 10 and 11. The exhibit will be held to demonstrate the various types of handicrafts which have been made by participants in the different Recreation Centers. All who possibly can are urged to attend as this exhibit promises to be one of the finest of its kind.

**Satin Slips**
