Little Chats About Your Health

WHY EXCESS FAT IS DANGEROUS

The danger of obesity is better realized when it is known that three of every ten fat people become troubled with diabetes.

Four of every ten fat people past the age of 30 years have high blood pressure.

Proper dieting and right exercising—both practiced under the physician's directions—will reduce both the fat and the danger which accompanies it.

Always consult your physician regarding all health matters and make this your prescription headquarters.
