

Exhibition Match at Winnetka to Benefit School for Blind

The Winnetka Lions club is sponsoring their third annual exhibition golf match, Sunday, June 30, at Sunset Ridge Country club. Patricia (Patty) Berg, Tommy Armour, Marion Miley and Harry Cooper will be featured in the match, the proceeds of which will benefit the Hadley School for the Blind.

An opportunity is seldom offered golf fans to witness a match between four players such as those represented in this foursome.

Mrs. Schaaf's Mother Passes on Wednesday

Mrs. Regina Z. Ebeling passed away early yesterday (Wednesday) morning at the home of her daughter, Mrs. C. W. Schaaf, 200 Ravine drive. She was 70 years old, being born in Austria, and was the wife of the late Justice Ebeling.

Private funeral services will be held today (Thursday) at her daughter's home, with burial in Graceland cemetery.

Remodel Alcyon Cleaners Plant

Upper left is the new modern store and office interior of Alcyon Cleaners. Lower Photo shows the finishing department where garments are carefully pressed and hand finished.

The latest model Hoffman Safety Dry Cleaning unit pictured above is the most modern equipment available.

The Alcyon Cleaners, formerly Unique Norshore Cleaners, have recently completed remodeling their entire plant.

The new Hoffman Dry Cleaning unit employs a new type of innermost solvent and the operation consists of a thorough cleansing in this solvent after which garments are "whirled" in a unit of the machine known as an extractor. This whirling operation removes all of the excess solvent and prepares the garments for the final operation in cleansing. This operation is carried on in a "safety tumbler" which thoroughly dries the garments and renders them soft and rich "in fabric and feel."

The new plant includes a complete solvent reclaiming system which in reality may be compared to a miniature refinery. As garments are cleaned, the solvent which carries the soil is being constantly removed and replaced by fresh, clean, newly

filtered solvent. In addition to the filtration unit the "refining" devices also include a complete distillation process which is mechanically accomplished with a minimum loss of time.

All garments are very carefully inspected before and after cleaning, for spots, open seams, buttons, etc., before being packed for delivery.

Ray Molendi invites everyone to visit and inspect his cleaning plant and assures everyone a pleasant as well as an educational visit.

Leo Scheetz, the plant manager, will explain every detail and answer any questions pertaining to your wardrobe.

Rev. Russell Carr Leaves Grace Church

Rev. Russell V. Carr, who has served the Grace Methodist church of this city for the past two years,

will preach his farewell sermon on Sunday, June 30, at 10:30 a.m. He has been called to the Methodist church at Belleville, Wis. His successor has not been selected as yet, but Mr. Carr will plan to spend one day each week in Highland Park taking care of the work of the church until that successor is chosen.

Mr. Carr will preach on the subject, "A Little Further," this coming Sunday. The service will be followed by a meeting of the Official Board of the church at 11:30 and all members are urged to be present.

Russell Carr began his ministry in Highland Park on June 19, 1938, while a student at the Garrett Biblical Institute in Evanston. He was graduated with distinction from that school early this month and was awarded a Graduate Fellowship for further study which will be used at the University of Wisconsin while serving the Belleville charge. His ministry in Highland Park has been successful and the best wishes of the church and of many friends go with him and Mrs. Carr as they begin work in this new field.

Coordinating Council Meeting Announced For Next Tuesday

Representatives for seventy local organizations have been asked to meet on Tuesday night at 8 o'clock to hear the report of a Nominating Committee, the chairman of which is Mr. George Scheuchemflug. This committee was appointed following a meeting held last April at which time the need for and value of a Neighborhood Co-ordinating Council was voiced.

There will be a list of officers presented for election who will organize and plan the functioning of an agency which will bring together the already existing civic, social and religious forces of the neighborhood, hoping to solve their common problems and make more effective the efforts of each and all of them, if possible.

It is hoped there will be a good attendance at this most important meeting, and that every organization in the community will be represented.

We recently installed the most modern shoe repair equipment on the North Shore. Your old shoes will look like new when you have them repaired by Louis Quick Shoe Repair.

LAMAC-WELD your shoes, it's the modern resoling method . . . no nails . . . no stitches.

Something New in the World in Burial Tombs

A new everlasting and water-resisting burial tomb is now in use in NORTHSHORE GARDEN OF MEMORIES, and will be in other cemeteries in the near future. It will not have concrete on the outside and asphalt on the inside, but will be of massive and reinforced concrete, heavily covered with a specially prepared and patented preparation of PURE ASPHALT. It is true that well-made concrete will last indefinitely when placed below the frost line in the ground, but all concrete is porous, and hence, water will penetrate it. It is a matter of simple elementary knowledge that all ground, except in deserts, is annually saturated with water at least for short periods of time. Good drainage will prevent water from staying in the ground above the drains for more than a few hours at a time, but many burial places are not drained at all, and water in contact with any porous substance, even for a short time, will penetrate that material.

The writer has been active in the cemetery business for more than 25 years, but never has he given assurance to any person that a plain concrete vault is water-resisting. It is well known that it will not exclude water. As both wooden and steel boxes have been barred from NORTHSHORE GARDEN OF MEMORIES for several years, and from a few other cemeteries for a short time, because they are neither permanent nor waterproof in the ground, and as the fact that simple concrete vaults are not waterproof has become well known, a vault which is composed partially of concrete and partially of asphalt has been in use for two or three years. It is a scientific fact that specially prepared asphalt is not porous and, hence, is absolutely water-resisting when properly prepared and applied to concrete; and, also, is everlasting. This combination unites strength, perpetual durability, and water-resisting qualities. That is a verbal picture of the WESTERN WATERPROOF TOMB! A STEP IN ADVANCE.

However, a very thin lining of asphalt on the inner side of a concrete vault, fastened only by the use of ordinary kerosene oil is not considered a permanent fixture there. The president of the company which makes the only other burial vault composed of a combination of asphalt and concrete told the writer of this statement in his office that the only means he had of fastening the asphalt on the inside is by the use

of kerosene oil. Practical men who have had ripe experience in concrete work, also in various uses for asphalt and in many phases of waterproofing, assert that it has been proven that water which will surely penetrate the concrete wall will inevitably push against and separate the thin layer of asphalt from the inner side of the concrete walls of the vault. It is only reasonable that such a result should be experienced, as there is certainly nothing permanent in the adherence of such a lining to a concrete wall by the simple action of plain kerosene or any other kind of oil or greasy substance. Suppose a pore in the concrete wall of a grave is only one-hundredth the size of a common pin; then one hundred pores will let as much water pass as one pin-hole in a rubber sack, and one thousand pores will admit as much water as ten pin-holes. There are many times one thousand pores in the sides, ends, bottom and cover of a concrete grave vault and therefore, it will require only a short time for a concrete vault, lined with asphalt, to be filled with water after a sufficient volume of water accumulates between the concrete wall and the asphalt lining to cause a serious bulging (like a water blister on one's hand) and then to force a break in the asphalt lining. Then the vault is no longer waterproof. The concrete is good to furnish strength and durability and the asphalt is good to furnish absolute waterproofing if properly applied to the outside of the concrete vault.

After 3 years had been spent in studying and experimenting with a view to developing the most perfect waterproof burial tomb in the world, one of these tombs was sealed and put into one of the lakes of NORTHSHORE GARDEN OF MEMORIES. Although the tomb for adults weighs nearly 2,000 pounds, this tomb would not sink as, of course, it was air tight. We sank the tomb by piling sand bags on the top of it. After being in the water more than two months we removed this tomb and opened it by methods known only to experts in the business. We found all the contents of the tomb to be as dry as when they were placed therein and the tomb placed in the water. We guarantee that no water will ever penetrate one of our tombs, although it sells for only \$100. This puts the family of limited means on a par with the rich man in furnishing a means of protecting the dead from the water and the living creatures in the ground for all time to come.

JUST THINK OF IT!
