LONG before there was any thought of a national defense program, long before talk of the draft, conscription and quotas, we already had a gas supply together with our plant capacity, and also distribution system of such capacity, to provide a safe operating margin in excess of the normal demands for gas on the North Shore.

Furthermore, plans have long been made to increase substantially, on short notice, even this present capacity whenever additional need should arise.

Today this practical peace-time preparedness, based solely upon our faith in the future home and industrial development of this area, now becomes a sound reserve of facilities ready at any time for any national emergency.

Thus we have automatically mobilized for whatever demands industry may make upon us in any crisis . . . at the same time thus assuring our customers that whatever happens their service will not suffer in the slightest.
