# Extra Protection!

CO-OP MILK BOTTLES ARE SEALED WITH A STERILIZED HOOD

CO-OP *Sealed*  
PURITY IN DELIVERY

BOTTLES PROTECTS MILK

Modern equipment and up-to-date facilities WITHIN THE DAIRY assure the utmost in hygienic conditions for the handling of milk BEFORE it is delivered.

Sealon hoods enable us to extend our "protection service" UNTIL THE TIME THE MILK IS ACTUALLY USED.

In order to protect your bottle of milk, we not only cap the bottles, but also cover the entire

bottle top with a heat-sealed hood. Special machines in our dairy apply this water-proof closure at a temperature of 320°F., which means that the hood is completely sterilized at the time of capping.

When you break the seal of the hood, you may be secure in the knowledge that no hands have touched the top of your bottle, since it was made sterile-clean at the dairy.

Look for Co-op milk bottle with its heat-sealed hood.

INSIST ON SEALRIGHT HOOD PROTECTION FOR YOUR MILK.

To open the new Co-op Handy Quart, you must break the seal yourself by loosening segments on the side.

\* \* \*

This cap retains its hood shape after the bottle is opened. It may be used as a sanitary cover until the bottle is completely empty.
