Locomotive Firemen and Engine-Then he got a sudden case, of hot-foot. He quit herding figures and was off to China as adviser to the ministry of communica tions. For 30 years, he has been battling plague, famine, pesti lence, social disorder and the feudal hang-over of past centuries, as China threw off the Manchus and moved out into the modern world. Directly or indirectly, he probably has saved as many human lives as any other man living.

> The modern world seems to be mainly an extension of the troubles Dr. Baker has seen. Arriving in New York on a ship from the Pacific war zone, he is calmly hopeful about China, as always, and says that although the rail end of the Burma road is closed, the road is still open, and the Chinese have enough goods stored up to keep traffic moving for

> He knows a lot about this. It was just a year ago that he was made director general of the Burma Road Construction company - a drab name for one of the most stirring exploits in history. Dr. Baker cherishes the Order of the Bountiful Harvest and the Order of the Beautiful Jade, conferred upon him by the grateful Chinese. He is off to his home in Mill Valley, Calif.

From his home in Eagle, Wis., Dr. Baker went to the University of Wisconsin, taught country school for several years and, during his years in government service qualified as a specialist on fiduciary problems of railway management. In China, he found not only a tangle of unrelated railroads, shoved in by various quarreling exploiters, but a morass of human misery which enlisted him for three decades in his fight against starvation, in which railroad organization was only a detail. As director of the American Red Cross famine relief in 1920, he get in training for his Burma road job by building 850 miles of railroad to get wheat to famine victims.

With his Chinese decorations, Dr. Baker takes back with him to Mil Valley an honorary degree from his alma mater. He is 61 years old, big. vigorous and handsome.

A RMY research engineers usually aren't around when the band begins to play and they don't often get medals and headlines, although they are Strikes at Enemy right in the With Bar of Non-thick of the

Melting Chocolate toughest in-fighting of a machine-age war. Their sharp pencils, spearing a new formula, may damage the enemy more than any 16-inch gun. Here's one of them, studiously

inconspicuous in a Washington cubbyhole for many years, one Lieut, Col. Paul T. Logan, casually in the news in a little item from Harrisburg, Pa., announcing that some big factories were taking up large-scale manufacture of his new non-melting checolate bar, for the army. That might sound like boondoggling, but, back-trailing the colonel two or three years, you find that the chocolate bar is the army's proven solution for getting top mileage and staying power for jungle fighting in tropical coun-

The colonel quietly turned in his chocolate bar in October, 1939, after several years of research and experiment. It is made of raw oat flour, bitter chocolate, cacao fat, sugar and skimmed milk, with a small dash of vanillin. It doesn't sound like food for heroes, but army records show that just a few bars of it will run a soldier until he has to get his shoes half-soled. Also, soldiers like it.

People who have been to Iowa. or who have read Phil Stong's books, know that that's where real connoisseurs of bulk food come from-as did Colonel Logan. After entering the army from civilian life, he was graduated in the infantry school of-ficers' course in 1926, from the Q.M.C. subsistence school in 1932, and in 1939 from the Army industrial college. The non-melting checolate bar idea is one of Colonel Logan's many adventures in forethought when jungle aghting seemed quite remote.

to make your electric appliances last longer

Now that all of us are trying to get the most out of the things we own, it is wise to remember that the electric aids in our homes were built to last. If we don't mistreat them, if we give them a reasonable amount of care, they will respond by continuing to perform their time-saving tasks through the uncertain period ahead.

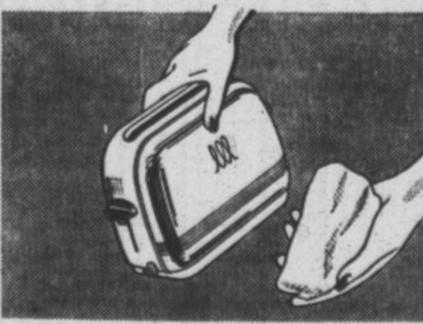

Here are five simple ways to make electric appliances last longer. Tear this out of your paper-let the whole family study it-save it for reference. Faithfully carry out these five suggestions in your home, and be confident that you are adding months and years to the lives of your electric servants.

Instruction sheets. Practically every electric appliance is accompanied by an instruction sheet or tag, printed by the manufacturer. Don't throw it away-read it carefully. Suggestion: attach a small bulletin board to your kitchen wall, and pie up all instruction sheets on it.

Zo Cleaning. Electric motors wear better if they are kept clean. Wipe dust and grit off the exposed parts of your appliance motors with a soft, dry cloth.

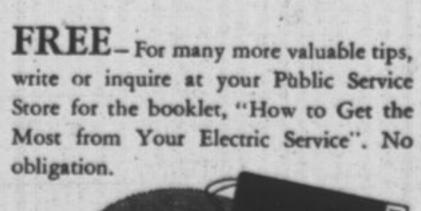

3. Keeping dry. Never allow irons, toasters, space heaters, waffle irons, or other appliances with heating elements to get wet. They may be damaged by water. Clean with dry cloth.

Lubrication. Electric motors should be lubricated every six months. Use six drops of light oil in each oil hole (less for small appliance motors). If motor has grease cups, use light grease, or vaseline thinned with light oil.

Do Never put off a repair! If you think an appliance may need adjustment or repair, call a service man at once. A skilful twist of his wrench may prevent a costly overhauling later.
